

JFrog to expand its presence in Asia-Pacific, with a focus on China

JFrog Ltd has announced it will be expanding its presence in the Asia-Pacific (APAC) region, specifically in the People's Republic of China. The expansion, which complements JFrog's already strong presence and offices in India and Japan, enables the company to accelerate

its services and engagements with customers and local partners in the region as their demand increases for JFrog's end-to-end DevOps solution.

The growth of JFrog's local business operations in China will span local technical DevOps support, and sales and marketing teams will provide frontline support for the growing list of Chinese enterprises looking to automate their software delivery life cycle. Tali Notman, chief revenue officer at JFrog, said, "We see impressive growth and maturity in the Chinese market and we are excited to expand our presence to better serve the community. With some of China's leading companies increasingly adopting DevOps and DevSecOps, our growing footprint and strong partnership in the region puts us in a better position to serve our customers' growing needs, and further support our thousands of global customers that have development teams in APAC and can now benefit from more trusted experts and local resources next to them."

IDC predicts that by 2025, up to a quarter of A-500 companies in APAC will become software producers to digitally transform and maintain their A-500 status. And by 2023, 60 per cent of Asian 1000 companies will shift security to earlier in the development process, so that security engages with DevOps teams to review application architecture and release plans early on.

JFrog Artifactory is a universal package manager and container registry solution, and JFrog Xray is a continuous security solution for open source vulnerabilities and licence compliance. They are both part of the JFrog DevOps Platform and are used by more than 100 enterprises in China.

Julia helps to speed up developments in AI, medicine and robotics

Handling the huge amounts of data for vaccine development requires advanced tools. 'Julia', a relatively new software language, has surged in popularity due to this. It delivers comparable speed and functionality to programming in C while also allowing scientific and numerical computing. Spectrum Instrumentation has created a software development kit (SDK) for programming its full range of over 200 different digitisers, generators and digital I/O products using Julia.

An important feature of Julia is that it has been specifically designed for high-performance applications that require fast processing of data, like machine

SUSE appoints Vishal Ghariwala as its chief technology officer for APJ and Greater China

SUSE has announced the appointment of Vishal Ghariwala as its new chief technology officer (CTO) for the Asia-Pacific and Japan (APJ), and Greater China regions. He brings to SUSE more than 20 years of experience in cloud computing, cloud native applications and middleware. He has

spent half his career working in open source companies.

As the new CTO for APJ and Greater China, he

will focus on executive level engagement with key customers and partners and on growing SUSE's mindshare in the industry. Ghariwala's vast technical experience will also see him support the global office of the CTO's objectives in identifying and driving innovative technologies and opportunities in enterprise Linux, Kubernetes management and edge solutions to benefit SUSE and its customers. He will be based in the Singapore office.

He joins SUSE from Red Hat where he was director for cloud native application platforms. Before that, he also held key technical and presales roles in government and tech companies such as Infocomm Development Authority of Singapore, ILOG and IBM.

Thomas Di Giacomo, chief product and technology officer, SUSE, said, "Vishal is a passionate leader who brings with him a wealth of experience in the tech sector. He has an admirable record of success in propelling and growing enterprises under his portfolio. I am confident that he will add immense value to SUSE and our customers as we continue to innovate and evolve ahead of the times."
