

Aserto raises US\$ 5.1 million in seed funding for its authorisation service

Aserto has announced the launch of its authorisation-as-a-service company, making it easy for developers to build enterprise-ready SaaS applications. It has received US\$ 5.1 million in seed financing led by Costanoa Ventures with participation from Heavybit Industries as well as angel investors Bob Muglia, former CEO of Snowflake; Mathias Biilmann Christensen, co-founder/CEO of Netlify; and Tom Preston-Werner, co-founder of GitHub. This round of funding will be used to accelerate product development and broaden access to its private beta.

Developer APIs are now commonplace from SendGrid for email delivery, Twilio for text messaging, Stripe for payments, and Auth0 for authentication. Each pioneered the trend to use a developer API for important functionality that isn't their core competency. Authorisation is next. Aserto co-founders Omri Gazitt and Gert Drapers possess over six decades of experience at Microsoft, HP Cloud, Puppet, and Hulu building databases, directories, developer tools, cloud platforms, open source IaaS and PaaS projects, and running billion-dollar businesses.

James Lindenbaum, co-founder of Heroku and Heavybit, said, "A policy-centric authorisation solution for developers is a glaring hole in the market, and there is no team on the planet better equipped to build it to enterprise grade. Heavybit investing in Aserto was a no-brainer."

Julia user, he says: "We perform complex data acquisition and control, with 30 high speed signals, using three Spectrum Instrumentation cards, operating in closed loop operation 24/7. Our laser makes 500 pulses per second and we have to calculate, in real-time, what has to happen next and adjust the controls. For that we have to get the result quickly. That means fast electronics, fast evaluation and then fast control of the hardware. We have found Julia offers a unique combination of speed and dynamic programming, simplifying the software development."

learning and scientific computing. For example, libraries include optimised source C and Fortran code for linear algebra, random number generation, signal processing and even string processing. Julia also offers parallelism.

Dr Josef Höffner from the Leibniz Institute for Atmospheric Physics in Germany develops high performance LIDAR (light detection and ranging) systems to measure temperature and wind speed in the atmosphere. Now a

iText joins the MuleSoft Technology Partner Program

iText Software has announced that it has joined the MuleSoft Technology Partner Program. It has contributed to the partner ecosystem by releasing a MuleSoft Certified Connector for iText DITO, which enables organisations to quickly and easily connect with the iText DITO API to generate PDFs using data from any system – no matter where it resides. It is available in Anypoint Exchange for all Anypoint Platform users to access.

Brian Miller, senior vice president of business development, MuleSoft, said, "Industries are facing new demands that push them to accelerate the pace of digital transformation. The Connectivity Benchmark Report shows that integration challenges are slowing down critical digital initiatives for 85 per cent of IT organisations. This partnership allows our mutual customers to create a composable

enterprise by securely unlocking and integrating their data and apps to deliver new levels of speed, agility and efficiency."

iText DITO is a data driven, template based PDF generator that simplifies the process of creating and maintaining PDFs for a diverse customer base, including many of the Fortune 500 companies as well

as small businesses and government agencies.

Gary Fry, CEO, iText, said, "This collaboration will make it easier than ever for the enterprise community to integrate iText DITO with the other systems on MuleSoft. We look forward to expanding our shared client base to help companies streamline and make more efficient the process of document generation."

The MuleSoft Technology Partner Program includes leading enterprise software companies across both functional applications like CRM, enterprise resource planning (ERP), marketing automation, and HCM, as well as across industries, including financial services, healthcare, retail, media and telecom. Using MuleSoft's
