

Figure 3: Launch your first instance

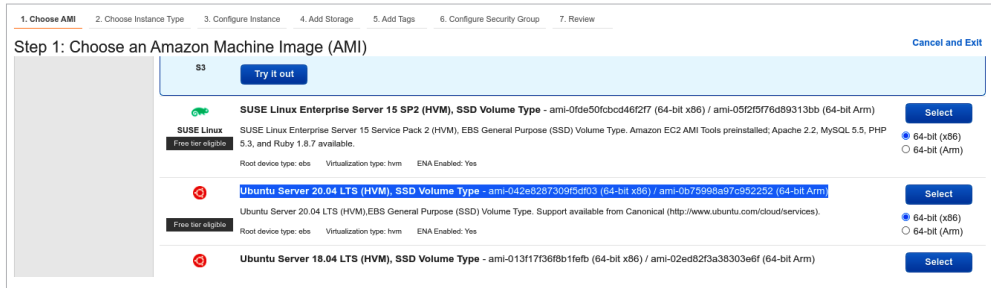

Figure 4: Select instance type

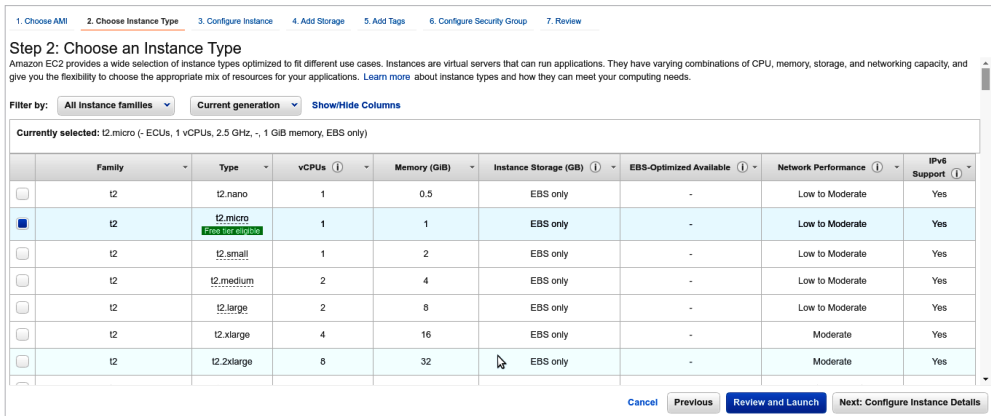

Figure 5: Select instance version

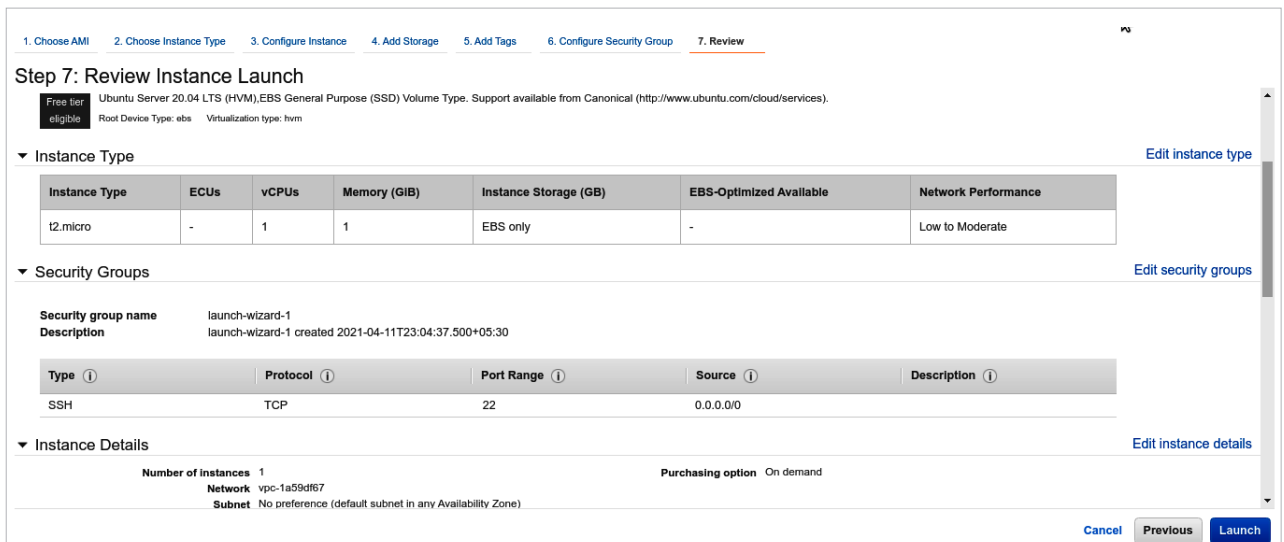

Figure 6: Launch instance

Phase I: Create an EC2 instance with elastic IP and open port 9033 in the security settings

Log in to your AWS account; you will land on the 'AWS services' page.

Now select *All Services >> Compute >> EC2*.

You will see 'Resources' as shown in Figure 3; select 'instance (running)'.

Here you can see all your instances. No instance is running at present, and we are going to create one. Click on the top right corner on 'Launch instances'.

Now, We have to follow seven steps to configure the instance. I am selecting the Ubuntu 20.04 server (which comes under the free tier) for demonstration purposes. Click *Next* to
