

Restart SSH:

```
sudo /etc/init.d/ssh start
```

Local system

In your local system, start the Web server. I have started a localhost server on port 4000 by installing the Node.js and Express.js packages:

```
const express= require('express')
const app = express()
const port = 4000;
```

```
app.get('/', (req, res) => {
  res.send('Hello World!')
```

```
})
app.listen(port, () => {
  console.log(`Example app
listening at http://localhost:${port}`)
})
```

It is now time for the final command in your system which will map your node server to the AWS instance. Open the terminal in a local computer, and

type the following command:

```
ssh ec2-user@52.66.1XX.35 -R
9033:localhost:4000
```

Now open your browser and type in the URL: <http://52.66.1XX.335:9033>.

Bingo! You will see 'Hello World!' there. That's a response from your local system.  END
