  <!-- CODELAB: Add the install
script here -->
  <script src="/scripts/install.
js"></script>
```

Successful Lighthouse audit

After all the above changes, launch dev tools through the '...' menu in the context menu of the Web page. Then, choose *More Tools -> Developer Tools -> Audits* and generate a report as shown in Figure 4.

If all goes well, you should get a successful report, as shown in Figure 5.

You can also try installing your PWA in your Web browser and your mobile phone. You can launch the app in the mobile phone and install it too. The code for this project is also available in Glitch. Feel free to mix and edit the same.

In this article we looked at how to make a progressive Web app by getting hands-on to develop a coronavirus statistics dump with a Web scraping

app built with Cheerio in Glitch. We then made various changes, as required, with boilerplate JavaScript code in order to pass a Lighthouse audit. Now you are all set to take control of your Web apps and make them all-powerful and universal with many more tools and strategies to explore. All the best in your PWA journey! **END** 🐧
