To conclude, here's a quick view of the Robot Framework's features:

- Simple tabular syntax
- Built-in keywords from the Selenium library (open browser, close browser, maximise browser, etc) and also user defined keywords
- Supports a lot of external libraries like Selenium library, database library, FTP library and HTTP library
- Possible to write test cases that work across platforms
- Data-driven test cases
- Separate test data editor
- Clear reports
- Detailed logs
- Generic test libraries
- Support for parallel execution of test scripts
- Text editor support: Eclipse, Emacs, Vim, Visual Studio code

This framework can be containerised and integrated with a CI tool like Jenkins.
