

“Seventy per cent of Red Hat’s business in the Asia Pacific is through the partner ecosystem”

Andrew Habgood, senior director, Partners and Alliances, Red Hat Asia Pacific

Here’s a quick review of the Red Hat Asia Pacific Virtual Partner Conference 2020 held in August this year.

Red Hat is about to reach 4,000 partners in the Asia Pacific, and despite being acquired by IBM, partners have continued to join,” said Andrew Habgood, senior director, Partners and Alliances, Red Hat Asia Pacific at the Red Hat Asia Pacific Virtual Partner Conference 2020 held in August this year. He added that 70 per cent of its business in the Asia Pacific is through the partner ecosystem.

Habgood said that its partner ecosystem includes cloud partners, IHVs, ISVs, GSIs, and partners in the IoT and embedded domains. What the company is witnessing is the convergence of these partners.

This virtual event saw the attendance of more than 2,200 Red Hat partners, distributors, systems

integrators, independent software vendors (ISVs), original equipment manufacturers (OEMs), and solution providers.

Right culture is the key to digital transformation

Habgood stated that there has been a rapid digital transformation in the APAC region, and the pandemic has only accelerated it. He added, “Culture is the key to success in digital transformation. Without having the right culture, digital transformation is not possible.”

“Open source has moved beyond the status of simple technologies for games and hobbyists,” said Frank Feldmann, vice president, APAC Office of Technology, Red Hat. He highlighted that open source allows anyone to run the software for any purpose, see the source code and how

the software works, and modify it by bug fixes and enhancements. The solutions can come from anyone, even outside one’s organisation.

Feldmann added, “Open source gives the opportunity to share, which unifies contributors and helps them have a common vision. This kind of collaboration leads to a new development factor.” He further said that there are several benefits of open source. It helps to attract and retain talent, influence the direction of technological development, and improve the code quality.

The virtual conference kicked-off with a keynote presentation by Dirk-Peter van Leeuwen, senior vice president and general manager for Red Hat Asia Pacific, followed by sessions with Frank Feldmann, vice president, APAC Office of Technology, Red Hat; and Andrew
