

Habgood, senior director, Partners & Alliances, Red Hat Asia Pacific.

Open hybrid cloud

Feldmann stated that a balance between the business model and ethos is critical for customer success. He said that top global cloud service providers are 'harvesting' more than what they are 'seeding' in the open source community. They are leveraging the open source awe whilst consolidating customer access and control. He added that customers ultimately want and need to own their data, and they want partners that are not going to be competitors in any other part of their business.

He further said that the open hybrid cloud is how the customers will get to win. Red Hat follows the mantra, "Bring the code. Build the app. We will take care of the rest."

Right time for Indian partners to join in

India is a very important market for Red Hat. Abhishek Datt, CTO, Taashee Linux Services and Red Hat Partner, said, "This is the best time

Frank Feldmann, vice president, APAC Office of Technology, Red Hat

for any partner to jump in and use the Red Hat portfolio. Red Hat has now made it wholesome so that there is something in the kitty for everyone. There is huge potential not only on the infrastructure side but also across

all domains like automation and digital transformation, among others." **END**
