

Figure 3: A dynamic map generated by Leaflet

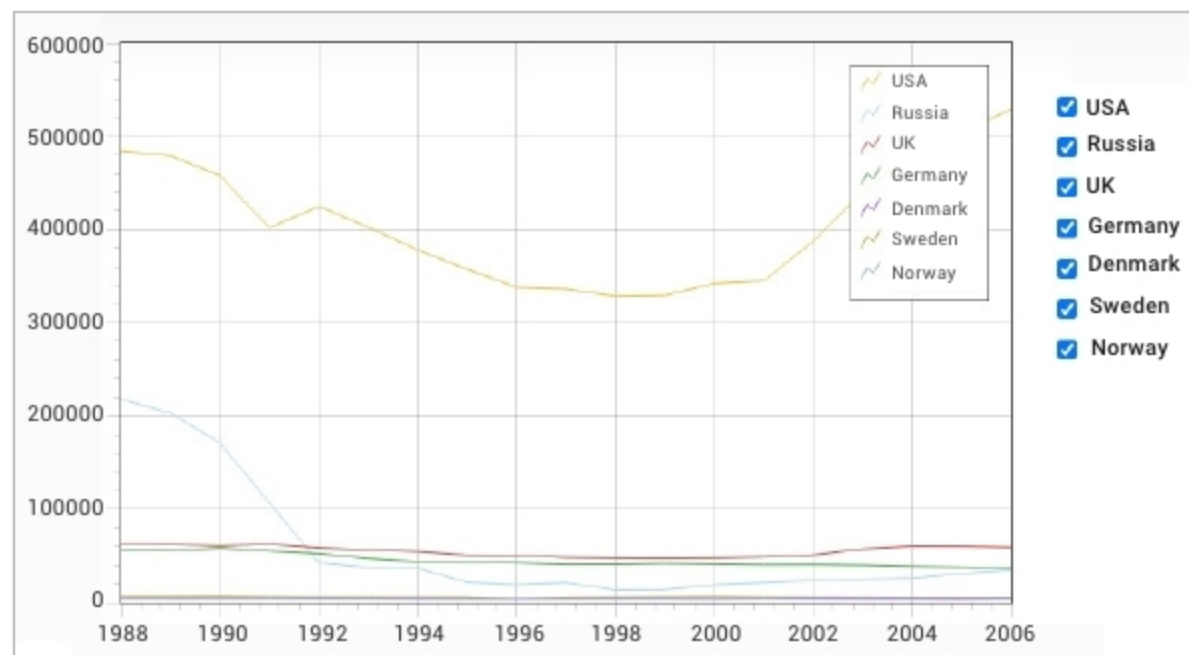

Figure 4: Plotting of toggling series using FlotCharts

Figure 5: Generation of a dynamic network using Sigma.js

A number of dynamic graphs and maps can be generated by Leaflet with the OpenStreetView, so that real-time locations and positions can be plotted on different types of display devices.

Flot

URL: <http://www.flotcharts.org/>

Flot is a plotting library developed with the integration of jQuery and JavaScript to focus on the generation of high performance and interactive plots. It is compatible with multiple Web browsers, including Internet Explorer 6+, Firefox 2+, Chrome, Safari 3+, and Opera 9.5+, and has an enormous set of features to display and analyse the graphs.

Dynamic graphs that have powerful features like panning, zooming, redraw, tick labels, log scales, etc, can be generated using FlotCharts.

Sigma.js

URL: <http://sigmajs.org/>

Sigma is a free and open source JavaScript based library for the drawing of graphs, networks and dynamic plots. It can be downloaded from <https://github.com/jacomyal/sigma.js/releases>. It allows networks to be published on websites, and lets developers integrate network searching into rich Web applications.

Sigma works as a rendering engine in which the data sets can be linked, and real-time graphs and networks can be plotted for multiple applications, including social network analysis, wireless networks, street maps, and many others. **END** 🐧
