

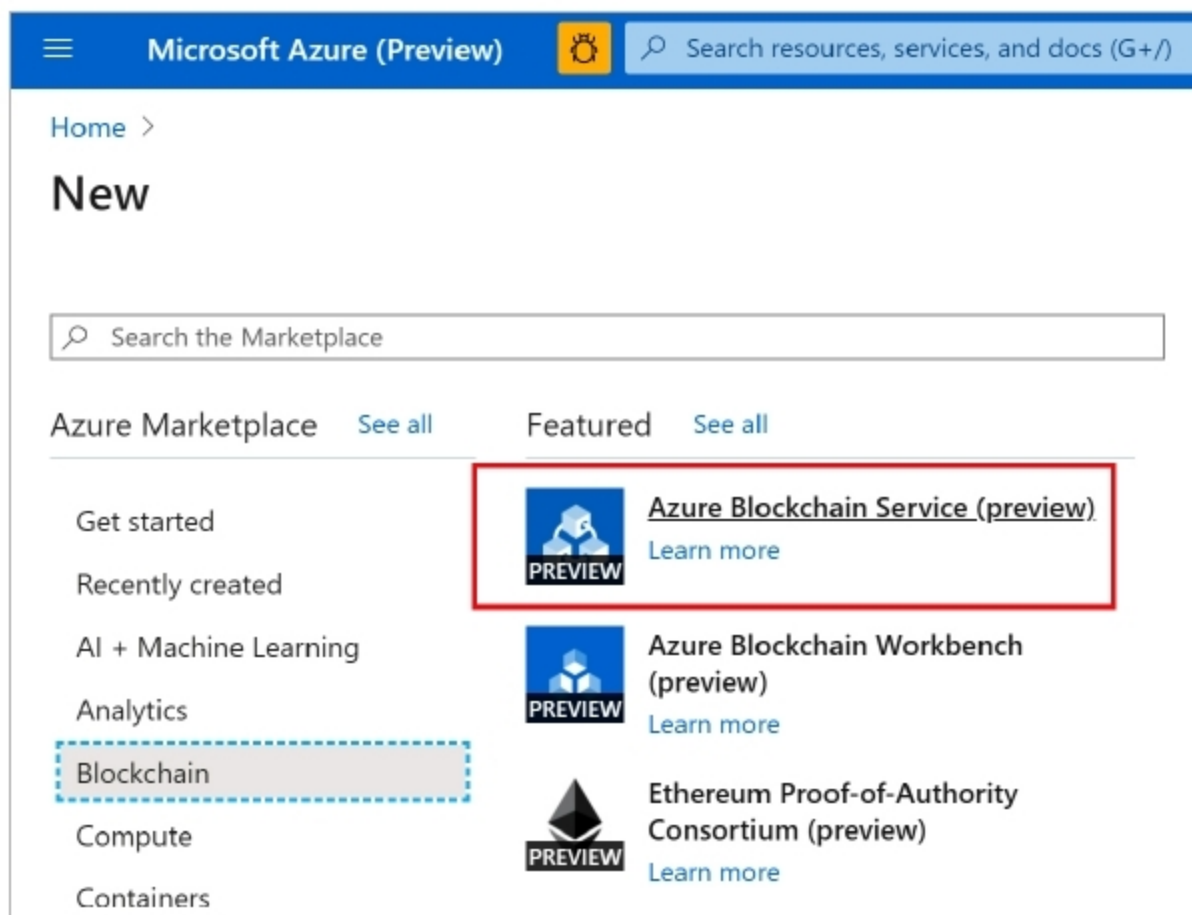

Figure 4: Azure Blockchain Service in marketplace

Pricing: Since Azure Blockchain Service is in preview, it may be costly for early use, and you need to plan the complete solution design with optimised service usage. Figure 4 highlights the Azure Blockchain Service in marketplace

Use cases of Azure Blockchain Service

Blockchain platforms are commonly used for transaction handling services and workflow managing services across different industries like financial services, retail services and healthcare systems, where some common use cases are workflow handling, transaction approvals, and patient data sharing in a secured way. For such

use cases, the platform should support characteristics like:

- Agility in design
- Scalable platform
- Integration with third party services
- Security services
- Monitoring and management services

With Azure Blockchain Platform services like workbench, you can leverage the power of the cloud platform and Azure native services to support all the above characteristics and develop distributed ledger services for a range of applications. These include sharing medical data and patient health records in healthcare, quick payment transfers with less processing charges, KYC approval process and workflow management, anti-money laundering services, document verification, supply chain management in retail, and inventory processing, to name a few. **END** 🐧
