### Create a secret

Upload options

Manual

Name \*

dockerpassword

Value \*

.....

Content type (optional)

the value is the password of ACR

Set activation date? ☐

Set expiration date? ☐

Enabled? ☒ Yes ☐ No

Figure 9: Creating the secret for user name and password

- Since you need the login credentials later, you can run the following command to get the user name and password:

```
$ az acr credential show --name
vivekiitbcontainerregistry
```

## Building the pipeline using YAML

Take the following steps to create the pipeline using the YAML file.

- Visit the website [dev.azure.com](http://dev.azure.com) and choose any project. If you don't have one, you can easily get a demo project from [http://](http://http://)

[azuredevopsdemogenerator.azurewebsites.net](http://azuredevopsdemogenerator.azurewebsites.net).

- First navigate to the *Repos* section of the project, and connect it to the GitHub repository (<https://github.com/VivekGupta137/azuredevops>). You'll see the screen as shown in Figure 3.
