

Payara Services and Azul to continue to ship secure builds of OpenJDK

Azul and Payara Services Ltd have extended their agreement to ship Azul's Zulu Enterprise builds of OpenJDK with Payara Platform Enterprise as part of the included support services of Payara Server and Payara Micro. This will ensure that Payara Enterprise includes the most secure builds of OpenJDK, supports clients with more versions of Java, and reduces clients' infrastructure costs while increasing their development flexibility by freeing them of complicated licence commitments. As part of the agreement extension, Azul will also provide Zulu Enterprise builds of Open JDK for Payara Enterprise Server on the AArch64 (ARM 64-bit) architecture.

and support plans. It has no proprietary licenses or field of use restrictions, has timely security updates and the industry's support.

Scott Sellers, Azul president and CEO, said, "We are delighted to continue our partnership with Payara. Both organisations share a total commitment to open source, security and the best customer support. We are honoured that Payara continues to include Azul Zulu builds of OpenJDK in their offerings, including now supporting AArch64 (Arm 64-bit) architectures."

Open source services market to reach US\$ 66.84 billion by 2026

The open source services market is predicted to grow at a CAGR of around 21.75 per cent and reach US\$ 66.84 billion by 2026 as per a report by ResearchAndMarkets. However, security challenges in open source services are preventing this market from growing faster, added the report.

The factors driving this market are cost-effective services and software that is accessible to everyone. As per the report, rapidly increasing demand for real-time data and for the open source intelligence market is aiding this growth.

The manufacturing industry has the largest share in the open source market due to a high adoption of FOSS in production and inventory planning. As per the report, "Asia Pacific is an important region contributing towards this market growth, especially China, where the IT sector is large."

BigCommerce launches Open Checkout

BigCommerce, an Open SaaS ecommerce platform, has launched Open Checkout, an open source extension of the platform's native checkout. The company said that this will empower merchants, developers and partners to design fully-customised checkout experiences.

Jimmy Duvall, chief product officer at BigCommerce, said, "The unveiling of BigCommerce's Open Checkout is an important milestone that advances BigCommerce's Open SaaS strategy by leveraging the benefits of open source without compromising the speed, security and simplicity that can only be achieved through a SaaS solution. By opening up the presentation layer, brands of all sizes

Yugabyte announces Yugabyte Startups to help optimise database operations

Yugabyte has announced Yugabyte Startups, a new programme for startups to optimise their database infrastructure and take advantage of the Yugabyte Platform, the software and support required to run YugabyteDB in production across clouds. Eligibility is based on the funding stage and annual recurring revenue. The startup programme requires a one-year commitment to Yugabyte.

As organisations deploy applications in and across clouds, their business initiatives are often hindered by the inability of traditional transactional databases to handle day-two operations without the implementation of cumbersome custom workarounds. Deploying applications across multiple clouds and regions to meet user demand creates a need to distribute data across geographies. Working around these issues with anything other than a distributed SQL database can lead to performance degradations and downtime, and force developers to spend extensive time on fire-fighting rather than innovating. To maintain a lean, high-growth startup, organisations need database solutions that can move as fast as their business.

yugabyteDB

The Yugabyte Startups package provides access to the Yugabyte Platform. The Yugabyte Platform subscription also includes 24x7 enterprise support and free access to Dev, Test, and QA environments.
