

OSS Offers Triburg Tech Stability and Cost Optimisation

Nitin Mohan
heads IT at Triburg

Triburg was using Microsoft servers and products before it opted for open source. Nitin Mohan, who heads IT at Triburg, says that, initially, the company was planning to change and enhance its emailing system as it was facing a challenge related to the performance of the mail server, as well as issues with scaling and licensing management. The company came to know about Tetra and invited the experts for an evaluation.

Mohan adds, "We were delighted by their knowledge and the solutions offered, and we decided to go ahead with these. Once these were successful, we forged a relationship with Tetra, and since then, we have been moving consistently towards open source solutions, as a first option."

Biswajit Banerjee, director and co-founder of Tetra Information Services, says, "Triburg's journey with open source started fifteen years ago. The partnership with Triburg started when we heard that they were facing a challenge with

Triburg/// is a leading apparel sourcing solutions provider in India, and has helped global brands build and grow their businesses out of the Indian subcontinent. It provides 360 degree solutions in design, product development, cost negotiations, quality manufacturing, vendor training and logistics. Every year, it designs 70,000 samples and ships over 50 million pieces of garments/products. Its leading customers include Ann Taylor Inc., American Eagle Outfitters, Ralph Lauren, TJX, Michael Kors and Tchibo. Headquartered in Gurugram, it has seven regional offices in India and five overseas offices.

Triburg has deployed various open source software solutions and says this move has definitely paid off in terms of convenience and cost. In an exclusive discussion with **Sreejani Bhattacharya** and **Niraj Sahay** of *Open Source For You*, **Nitin Mohan**, who heads IT at Triburg; **Biswajeet Banerjee**, director and co-founder of Tetra Information Services; and **Mukul Mahajan**, director and co-founder of Tetra Information Services (Tetra provides OSS software solutions to Triburg) talk about why Triburg decided to switch to open source and how this has helped the company.

Microsoft Exchange and they contacted us. Since then, a lot has changed in the adoption of technology, with cloud migration getting very popular. Their mail environment is now in the cloud and is hosted on Linux. Lately, there has been hybrid deployment of solutions, with some of it in the cloud and some on local servers."

Easy to manage and handle

Mohan says that the entire back office at Triburg now runs on Linux. He adds, "Previously, we used to use Windows Server. I had to employ a full time person to look at the servers. There was licensing to be managed. Once we shifted to Linux, we found the system very stable and easy to use."

He adds, "We are not using open source for only one or two applications. The transition to open source has been a journey and not an overnight phenomenon. We started with employing open source for e-mailing and then used it for
