other processes as well. I found it very easy to manage and handle emailing with Linux.”

The change did come with its share of challenges as the team was initially not used to open source. After meeting Biswajit Banerjee and Mukul Mahajan, the two directors and co-founders of Tetra Information Services, Mohan, Mohan realised that Triburg was on the right track. Tetra guided the people at Triburg through the technical difficulties and gave the solutions needed.

Away from licensee hassles

A large part of the IT infrastructure at Triburg has been migrated to OSS now, including the mail server, website hosting and application hosting. Going forward, there is a plan to adopt open source for Internet telephony too. Mohan says, “OSS provides tech stability as well as cost optimisation. We are away from licensee hassles, and are working with almost 100 per cent uptime with respect to our

solutions.” He adds, “We wanted to deploy a robust solution that helped in downtime issues and was easy to use, but cost was important too. I found that, in the long term, open source has turned out to be far more reasonable in cost also.”

Important to have a good vendor

The role of the technology vendor is crucial in implementing the migration to OSS. Mahajan says, “The vendor definitely plays a very important role in suggesting the right solution, as well as making sure that it works in a stable manner in the long run. Since OEM support is not available for many solutions, the vendor plays a very big role in ensuring the implementation is perfect.”

Mohan feels that whenever organisations are looking at adopting a new solution, they should first look at using open source. If an open source solution is available, they should go for it, after ensuring they have a good vendor who can help them maintain it. **END**
