//End

D:\EFY\efrawquery>

```

Figure 8: Program output

- The *FromSqlInterpolated* and *ExecuteSqlInterpolated* methods allow using string interpolation syntax in a way that protects against SQL injection attacks.

Limitations

- The SQL query must return data for all properties of the entity type.
- The column names in the result set must match the column names that properties are mapped to.
- The SQL query can't contain related data. If required, we can

compose on top of the query using the *Include* operator to return related data.

You can begin your journey with EF Core by logging on to <https://docs.microsoft.com/en-us/ef/core/>.
