

Build a Backup and Recovery Solution with Duplicati

Here's a simple tutorial on how to set up a backup and recovery solution on your Windows machine using Duplicati. If you don't have a data backup and recovery plan in place, you really need to read this article.

Data volume has been growing exponentially, and dramatically increasing opportunities for theft and accidental disclosure of sensitive information as well as sequential data loss. The most important preventive measure against data loss is to back up all your data and create recovery mechanisms.

There can be various situations that might result in loss of data. For example, a computer or hard drive failure could make data irretrievable, or even theft of a computer system could lead to loss of information. There is always the possibility of a virus or malware being introduced to a computer, which can erase a hard drive or prevent anyone from accessing it. Natural calamities such as fire, flood, or an earthquake could lead to

computer damage, preventing you from accessing files on your computer.

Data loss can happen to anyone at any time, and it might happen when we least expect it or are least prepared. So, you need to have your data backed up and available. Data backup is the best strategy to recover from accidental or malicious data loss.

Most of us store and process data on computers and mobile devices. But do we know the importance of data backup?

What is data backup and recovery?

Backup is the process of creating a copy of data to protect against accidental or malicious deletion, corruption, hardware failure, ransomware attacks and other types of data loss. You use it for recovery in case your original

data is lost or corrupted. Recovery is the process of retrieving data from a backup. It typically involves restoring the data to the original location or to an alternate location where it can be used in place of the lost or damaged data.

How does the backup and recovery system work?

Data backup requires the copying and archiving of computer data to a remote file server or to cloud storage, and making it accessible in case of data corruption or deletion. You can only recover data if you have backed it up. Do you have a data backup and recovery solution you can count on? If not, try Duplicati.

Duplicati is a free, open source, backup client that securely stores your backups on cloud storage services and remote file servers. The software is totally
