

MooTyper, called *mod_mootyper_moodle39_2020070801.zip*, is available for download at https://moodle.org/plugins/mod_mootyper. We will now install the plugin first in the local copy of Moodle to avoid any harm to the up and running Moodle server, if any. Log in as *admin user* and go to *Dashboard>Site administration>Plugins>Install plugins*. After successful installation of the plugin, log in as the user *Guru* (the teacher) and go to the course page of Moodle101. On the course page, after clicking the button 'Turn editing on', click on the link named 'Add an activity or resource' to add activities and resources. Figure 1 shows a number of Moodle activities available for you to choose from. The plugin MooTyper is shown inside a bold green rectangle in this figure.

Now, let us set up a typing activity in the Moodle course by clicking on this button. You need to provide details like name, time limit, required precision, keyboard layout, text error colour, etc. Of course, there are a large number of other options to customise the typing activity to suit your particular requirement. After providing these essential details, press the button 'Save and return to course'. Figure 2 shows the typing activity just created (marked with a bold green arrow mark), along with the other three activities discussed in this article in the course page of Moodle101.

Now we need to edit the typing activity further so that it is ready for the students to attempt. You can either choose from a number of sample lessons for typing, or you can create your own lesson for typing. We have created a new lesson called 'Typing Test 1' in which the students have to type the famous poem 'Twinkle, Twinkle, Little Star'. After setting up and saving the typing test, log out and log in again as the user *Shishya* (the student) to attempt this newly created typing test. Now go to the course page of Moodle101. You will see a link to the MooTyper typing test. Click this link to start the typing test. Figure 3 shows an attempt by the user *Shishya*.

Figure 1: Moodle activities to choose from

Figure 2: Four Moodle activities

In this figure, we can see details of the attempt like time, progress, mistakes, precision, hits per minute, words per minute (WPM), etc. The keyboard layout shown in the figure can be hidden during the typing test.

Game

All of you must be familiar with the proverb "All work and no play makes Jack a dull boy." It is widely agreed today that some part of academic activity in schools should be offered in the garb of games. Keeping this in mind, we introduce a Moodle plugin that tries to transform learning into a fun activity. The Moodle plugin called Game

allows a teacher to combine quizzes and glossaries with interactive games like Hangman, crossword, cryptex, millionaire, Snakes and Ladders, the hidden picture, Sudoku, etc. This plugin works in such a way that a student can play a particular game only if he or she correctly answers questions from a quiz or glossary. For example, consider a game of (standard 9X9 grid) Sudoku. To solve a Sudoku puzzle, you need to have a certain number of digits displayed in the 9X9 grid. The Game plugin will hide some of these required numbers until a correct solution is given to the questions associated with it. This plugin is maintained by Vasilis Daloukas, and the installation file for the plugin, called
