

mod_game_moodle39_2020081901.zip, is available at https://moodle.org/plugins/mod_game.

After the installation of this plugin by the *admin user*, the teacher of the course Moodle101 should first create a quiz or glossary with some questions so that the Game plugin can connect with it. We have created a quiz named 'Sample Quiz' with just one question. Creating quizzes in Moodle is a very simple task. The user *Guru* should click on the link named 'Add an activity or resource' to add a Sudoku game as an activity. The Game plugin option to choose a game of Sudoku is shown inside a bold red rectangle in Figure 1. The other games provided by the Game plugin like Hangman, crossword, cryptex, millionaire, Snakes and Ladders, and the hidden picture can also be viewed in Figure 1.

Now, let us set up a game of Sudoku in our Moodle course by clicking on this button. You need to provide details like name (the default name is Sudoku) and name of the quiz (in this case, the name of the quiz is 'Sample Quiz') to connect with the game of Sudoku. After providing these essential details, press the button 'Save and return to course'. Figure 2 shows the Sudoku game activity just created (marked with a bold red arrow mark). Now log out as the user *Guru* and log in again as the user *Shishya*. After logging in as *Shishya*, go to the course page of Moodle101, where you will see a link to the Sudoku game. Click on this link to start the game. Figure 4 shows a game of Sudoku generated by the Moodle plugin. You can see in this figure that the number in the cell marked 'A1' is hidden. This number (which is essential for the solution of the Sudoku game) will be displayed only when the answer to the question in the Sample Quiz is given. Figure 5 shows a question in 'Sample Quiz', which when correctly solved will result in the number behind the cell marked

Figure 3: A MooTyper typing test attempt

Figure 4: A game of Sudoku

'A1' being displayed. Notice that in the given example, the quiz has just one question. This is the reason why only a single cell is hidden. If there were more questions, then more cells would have been hidden in Sudoku.

Quizventure

The plugin Game gives students an incentive to solve answers to quizzes. What about using games in such a way that students can use them to learn and remember important facts in a subject.
