

drop elements to change where they are positioned in the certificate. After saving all these design changes made to the certificate, log out as the user *Guru* and log in as the user *Shishya*. Go to the course page of Moodle101, where you will see a link that allows you to download the certificate in PDF format. Figure 7 shows an automatically generated certificate issued to the student *Shishya* for the course Moodle101.

So far, we have discussed four Moodle plugins. But these are not the only plugins or the best in their respective categories. The choices are definitely based on the personal preferences and experiences of the authors. So it is absolutely essential to mention the other Moodle plugins, which could also be used to create activities that captivate the students. Some of these are listed below.

Exabis Games is a Moodle plugin that allows teachers to bring game-based learning into their courses. The two games supported by this plugin are called Braingame and Exaclick, which can be linked to the quizzes created by the teacher of a course. The Moodle plugin called iPal allows teachers to create online polls and anonymous surveys. This sort of feedback mechanism is essential in case of online education. ReadAloud by Poodll is a Moodle plugin that can be used to automatically measure the reading speed and accuracy of students. Please note that even though trial versions and demos are available for free, this is essentially a paid service.

The Moodle plugin called Socialwall Format allows teachers to change the look and feel of the Moodle course to a social learning platform, a style which the tech-savvy young children find easier

to relate with. Kindly note that this list is not complete too.

Before concluding, we would like to reiterate one thing. The pandemic will soon be defeated by the collective efforts of mankind but online education is here to stay and flourish, either as standalone online courses or as supplementary material to regular courses. So, it would be a good idea for educators and entrepreneurs to be proficient in learning management systems like Moodle. In most of these systems, it is

very easy to replicate a course. Moodle especially is very helpful in this aspect. For example, if you have created quizzes and activities for the subject History for the academic year 2020-2021, then it is very easy to reuse these contents for the same subject in the next academic year. Thus, over the years, a single teacher could produce a vast amount of quality educational material for his/her course. We strongly believe such large collections of quality educational materials are all we need for a bright future. **END** 🐧
