

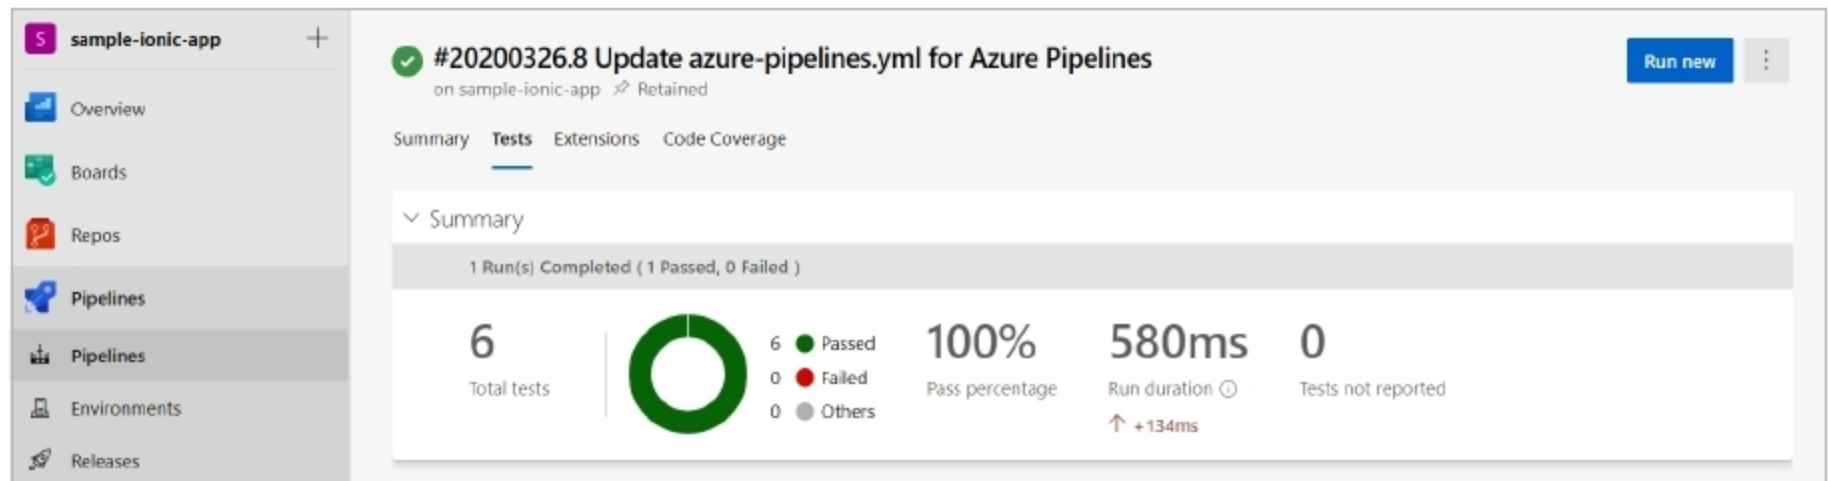

Figure 5: Unit test report in the Azure DevOps portal

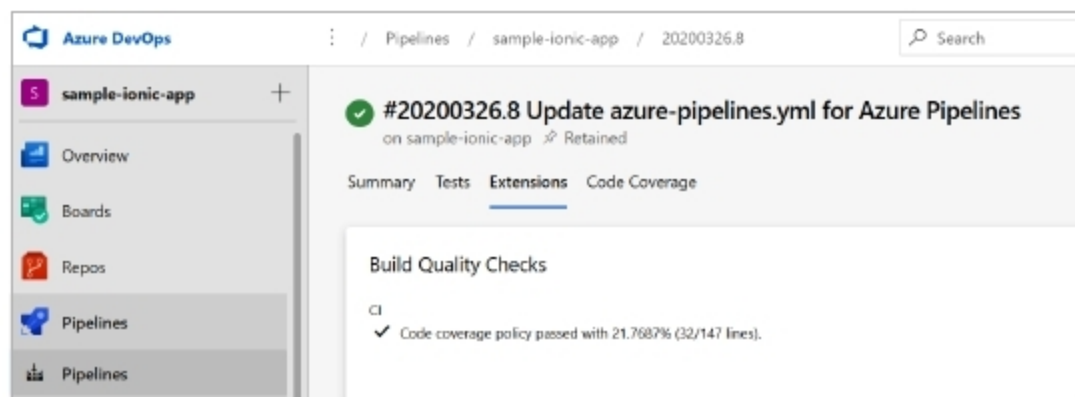

Figure 6: Build quality check results in the Azure DevOps portal

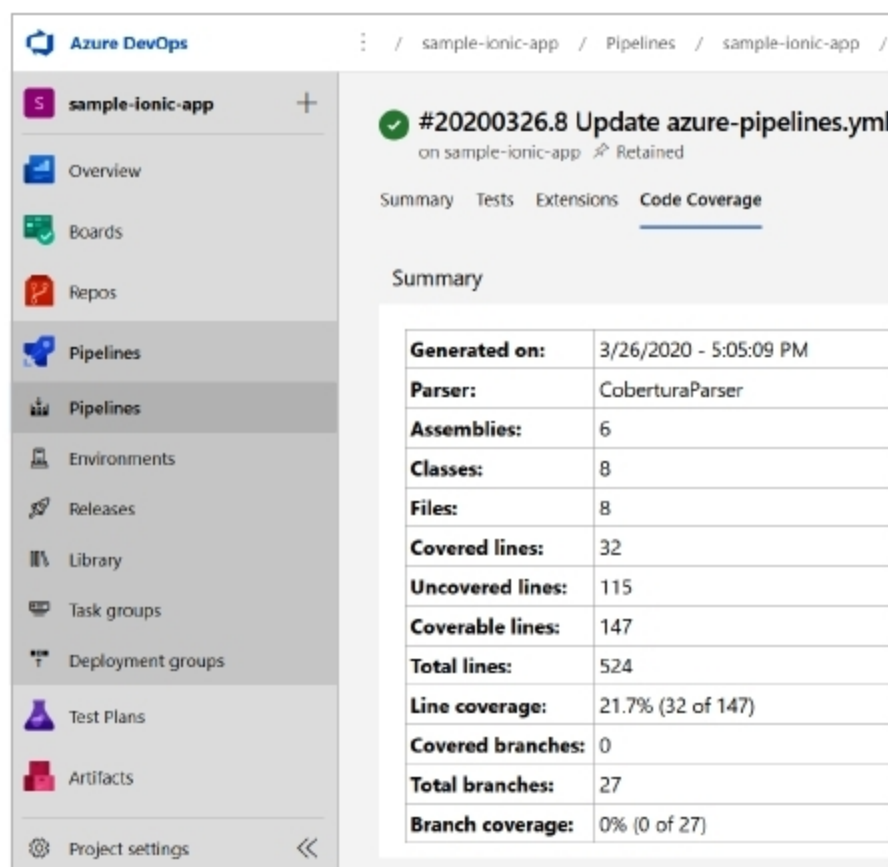

Figure 7: Code coverage report in the Azure DevOps portal

```
Contents: '**/*.apk'
TargetFolder: '$(build.artifactstagingdirectory)'
CleanTargetFolder: true
```

```
- task: PublishBuildArtifacts@1
inputs:
  PathToPublish: '$(Build.ArtifactStagingDirectory)'
  ArtifactName: 'drop'
```

```
publishLocation: 'Container'
- stage: "ContinuousDelivery"
  dependsOn: ContinuousIntegration
  jobs:
    - job: "CD"
      steps:
        - task: DownloadPipelineArtifact@2
          inputs:
            buildType: 'current'
            itemPattern: '**/app-debug.apk'
            targetPath: '$(Pipeline.Workspace)'
```

- Now run the pipeline.
- Verify the stages, and click on the stage to go to the console output.
- Verify the console output for stages available in the pipeline.
- The pipeline summary indicates Artifacts as well as *Test and Coverage* details.
- Verify the unit test results in the *Tests* tab.
- Verify the build quality check result summary in the *extension* tab.
- Verify code coverage summary.
- Verify all the published Artifacts by pipeline execution.

The next logical step is to upload this to the App Centre and the Ionic Cordova iOS pipeline. **END** 🐧
