App Service Plan

An App Service Plan is a home where App Service is running. It contains a set of compute resources. One App Service Plan can have more than one App Service. One App Service can't run on multiple App Service Plans. The App Service Plan is created in a specific region, and hence the App Service is hosted in the region where the plan is hosted.

Free, Shared, Basic, Standard, Premium, PremiumV2 and Isolated pricing plans are available in App Service Plans.

For specific features, you need specific pricing plans. The Standard, Premium and Isolated tiers in Azure App Service support multiple deployment slots.

An App Service Plan consists of a

region such as West US or East US, number of virtual machine instances, size of virtual machine instances such as small or medium; and the pricing tier such as Free, Shared, Basic, Standard, Premium, PremiumV2, and Isolated. The App in an App Service runs on an App Service Plan. All deployment slots run on the same App Service Plan.
