

Popular Cloud Based Free Platforms that can be Used for E-Learning

The ongoing pandemic has given a huge impetus to online teaching, as schools and colleges are wary of calling students to classrooms. The good news is that there are a number of free cloud based learning management systems that can help to do this job well.

Teaching and Learning From Home (TLFH) is the new term in education, which is in sync with the Work From Home (WFH) term for the corporate world. Learning management systems are being used by academia to implement TLFH.

A learning management system (LMS) refers to software for managing, monitoring, reporting, tracking, automating and distributing educational resources so that teachers and students can communicate efficiently in real-time.

LMS products were initially developed to identify gaps in training

and learning. Competent LMS software provides instructor-led training classroom management that can even be used for a flipped classroom for effective teaching and learning.

During the ongoing pandemic, online teaching and learning has been widely adopted by educational institutes. Even the corporate sector is conducting induction and training programmes as well as its meetings by using Web conferencing and online tools. As per UNESCO, there are currently more than 1.2 billion children worldwide affected by the closure of academic organisations and schools due to the COVID-19 pandemic.
