- Report generation
- Smartphone implementation
- Privacy and security based data sharing

Google Classroom combines docs, boards, slides, mail and calendar into a coherent forum to facilitate contact with students and teachers. Learners can be admitted to a Google Classroom course with a private code, so that privacy and security is maintained and there is no data leakage.

Google Classroom has the feature to create different types of real-time activities for academics including assignments, quizzes, study material, etc. Teachers can track the progress of each student by reviewing a document's revision history, and can return their work along with feedback after marking the tasks given.

The online assignments and tasks in the Google Classroom can be associated with particular marking or scoring criteria, so that the overall rank can be assessed for all the students.

Chamilo LMS

URL: <https://campus.chamilo.org/>

Chamilo is another e-learning platform that is used as a learning management system under the GNU GPL License with the aim of enhancing access to education and information globally. Chamilo is sponsored by the Chamilo Group to ensure the affordability and quality of education at a reduced cost by delivering the software free of charge.

From the reports and statistics put out by Chamilo, more than 53,000 corporate giants and organisations worldwide had used it freely as of August 2019.

The key features in Chamilo LMS include the following:

- Real-time course creation
- User management
- Real-time generation of certificates
- Real-time chat and communications
- SCORM 1.2 compatibility

Working with cloud based free platforms for e-learning

This article will briefly introduce you to three tools for e-learning from renowned cloud based platforms. These platforms are widely used for the real-time communication and delivery of teaching and learning resources.

Google Classroom

URL: <https://classroom.google.com/>

Google Classroom is an important and popular cloud based e-learning platform for academia.

The key features of Google Classroom are:

- Online assignments
- Grading of assignments with rubrics
- Dynamic communication
