Moodle LMS (moodle.com) has its own niche in the segment of e-learning, as it is a commonly used platform in the academic segment. It is a user-friendly learning management system (LMS) that serves learning and training needs around the globe across a number of organisations with a high degree of performance.

Moodle can be directly deployed on a cloud platform with a number of options. MoodleCloud (moodlecloud.com) is one of these options, using which Moodle can be used for teaching and learning activities without any dedicated installations. MoodleCloud provides the pre-installed flavour of Moodle LMS with assorted options of e-learning activities.

The key features of Moodle include the following:

- Blended course delivery
- Student messaging and notifications
- Flipped classrooms
- Grading of coursework
- Classroom and online events
- Collaborative learning
- Cloud compatibility
- Performance management system
- Live video conferencing
- Mobile learning environment
- E-learning programmes
- Plagiarism / similarity checker
- Payment gateways

Moodle offers a powerful range of learner-centred tools and shared learning environments that allow the automation of academic tasks with effectiveness. In
