

JFrog announces the pricing of its initial public offering

JFrog Ltd, the liquid software company, has announced the pricing of its initial public offering of 11,568,218 ordinary shares at a price of US\$ 44 per share. Of the offered shares, 8,000,000 shares are being offered by JFrog and 3,568,218 shares by some of JFrog's existing shareholders.

JFrog will not receive any proceeds from the sale of shares by existing shareholders. The underwriters have the option to purchase up to an additional 1,735,232 ordinary shares from JFrog at the initial public offering price, less underwriting discounts and commissions.

JFrog's vision is to enable continuous software updates through liquid software, empowering developers to code high-quality applications that securely flow to end users without interruption. JFrog products are available as open source, self-managed, and SaaS services on AWS, Microsoft Azure and Google Cloud. JFrog is trusted by more than 5,800 customers, with top global brands depending on it to manage their software packages for mission-critical applications.

Moov Financial raises US\$ 5.5 million in seed funding

Open source embedded banking platform Moov Financial has announced that it has raised US\$ 5.5 million in seed funding. This was led by Bain Capital Ventures, with participation from Canapi Ventures, Commerce Ventures, Gradient Ventures, RRE Ventures, Uncorrelated Ventures, and 27 influential angel investors including Zach Bruhnke, Brandon DeWitt, Sima Gandhi, William Hockey, Brian Kelly, Mengxi Lu, Charley Ma, Calanthia Mei, and Emily White. Veridian Credit Union also participated in the round after signing a strategic partnership agreement.

Moov's open source platform allows companies to deploy basic financial service solutions to receive funds, store value, and remit payments. This round of funding will enable Moov to continue to build the community, expand its engineering team to accelerate the product road map, and deepen partnerships and enterprise agreements.

Accurics releases upgrade of Terrascan

Accurics has unveiled an upgrade of Terrascan, the open source static code analyser that enables developers to build secure Infrastructure as Code (IaC). It will ensure Terraform templates avoid common security pitfalls in popular cloud providers such as AWS, Azure, and Google Cloud Platform. The company said that its built-in extensibility will enable support for other technologies such as AWS CloudFormation, Kubernetes, service mesh, and serverless.

Terrascan is included in the Super-Linter GitHub Action. It can be installed as a pre-commit hook to help detect issues before code is pushed into your repository, and also integrated into the CI/CD pipeline.

Cesar Rodriguez, head of developer advocacy at Accurics, said, "The rapid adoption of Infrastructure as Code is clearly meeting its intended goal -- to help organisations achieve more reliability by programmatically embedding policy checks earlier in the development life cycle. This is vital in an environment

where the scale and velocity of cloud breaches is constantly increasing, and organisations are required to implement policy guardrails to ensure that cloud native infrastructure is securely defined and managed. Terrascan is already playing a key role in this process within many organisations, and the newest iteration takes these important capabilities much further."
