

working on various cloud strategies. The enterprise may have one or some of its applications on the cloud. It either has the following available or is working on these aspects:

- Cloud strategy and vision
- Stakeholders' alignment
- Cloud enablement feasibility assessment
- Cloud adoption roadmap
- Training/workshops/sessions
- **Engaged stage:** In this stage, all major offerings are based on cloud solutions, and enterprises have the following:
 - Enterprise policies for cloud enablement
 - Centre of excellence (cloud services/technologies)
 - End-to-end solutions on cloud
 - Round-the-clock services (governance, monitoring, management, security, compliance)
- **Optimised stage:** In this stage, the enterprise has developed the core philosophy or strategy to go cloud-

first for any of its infrastructure and technical needs. It has incorporated the following in the system:

- Highest satisfaction for its customers
- Cloud-first
- Optimisations (performance/cost)
- Research and development
- Cloud-driven business innovations

The challenges and the solutions

However, the transformation to the cloud may encounter a few challenges, such as:

- Lack of awareness, knowledge and confidence in cloud services capabilities
- Limited budget and executive support for cloud adoption
- Business-critical needs alignment with cloud adoption
- Lack of direction for cloud adoption
- Security and compliance establishment on the cloud
- Availability of expert engineers/employees

- TCO for cloud transformation
- Optimisations for ongoing system monitoring, governance and maintenance
- Regular audits to establish all required security standards and compliance
- Dependency on single cloud providers
- Innovative usage of cloud services
- Expert cloud engineers in the staff

These challenges can be addressed by taking certain actions:

- Conducting sessions, training and workshops for awareness, knowledge and capabilities of cloud services
- Comparison of services of various cloud providers
- Existing system assessment and audit
- Business needs alignment with cloud adoption recommendations
- Cloud adoption roadmap
- Implementation of various POC and feasibility checks for cloud transformation
- Referring to similar use cases, case studies and success stories
- Functional and non-functional needs feasibility check on identified cloud services
- Education of employees for cloud services and their usage
- System monitoring and further optimisations
- Complete cloud transformation roadmap and plan
- Establishment of cloud centre of excellence
- Security and compliance need assessment and recommendations
- Available applications assessment for cloud transformation
- Migration of applications to the cloud
- Innovative applications and services implementation using cloud infra and services
- Ongoing assessment of the latest cloud services for further optimisation on performance or cost
