

Mindgate Solutions teams up with Red Hat to modernise its real-time payments services

Mindgate Solutions has announced that it has adopted Red Hat OpenShift to modernise its real-time payment services. It added that with Red Hat, Mindgate Solutions will provide a set of fully cloud-native offerings that can be deployed on any infrastructure.

Neeraj Bhatia, director, partner and commercial sales, Red Hat India & South Asia, said, “The introduction of the real-time payments network across the globe has presented banks a unique opportunity to revisit their payments infrastructure, emphasising the importance of deploying hybrid cloud infrastructure and containerised microservices in the banking space.”

Mindgate Solutions offers personalised digital payment solutions to banks, corporates, the government, and processors/aggregators in over 21 countries across Asian and Middle Eastern markets. It said that the company processes over one billion payment transactions per month globally in real-time.

Red Hat is helping Mindgate better adapt to the payment needs of one of the world’s largest digital economies through cloud technology that is allowing it to be more responsive to this dynamic market. By adopting a modern cloud architecture and advanced cloud tooling supplied by Red Hat, Mindgate will be able to release software more frequently and support the needs for an always-on service that its customers need.

Maria Palma, principal at RRE Ventures, said, “As the financial services industry adapts to an open source-first movement, we must build and invest in solutions that benefit all participants with transparent, community-driven solutions. I’m delighted to partner with the Moov team as they redefine the basic building blocks of money movement.”

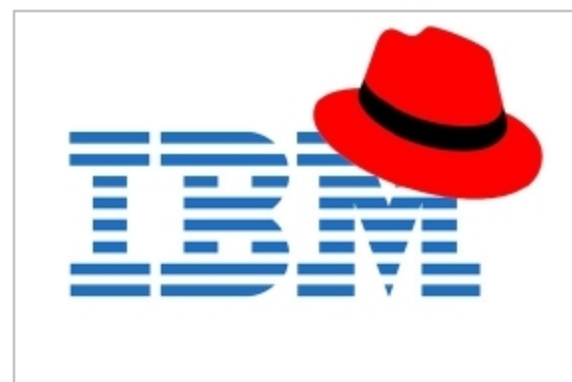

Moov’s banking-as-a-service platform takes a developer-first approach of being open source, portable to cloud providers or on-premises, modular for customisation, and decoupled from any single bank program.

Steven Hufford, senior managing director and chief operating officer of Raymond James Investment Banking, said, “Moov operates independently from traditional core banking systems, offering banks and credit unions the ability to collaborate and develop new fintech solutions. Rather than displacing branch systems, Moov-enabled institutions serve SaaS companies and fintechs with the latest technology protocols, benefiting all parties involved.”

Red Hat continues to acquire partners

Red Hat is about to reach 4000 partners in the Asia Pacific. Despite being acquired by IBM, partners have continued to join, said Andrew Habgood, senior director, partners, and alliances, Red Hat Asia Pacific at the Red Hat Asia Pacific Virtual Partner Conference 2020. He added that 70 per cent of its business in the Asia Pacific is through the partner ecosystem.

Habgood said that the partner ecosystem has a variety of partners like cloud partners, IHVs, ISVs, GSIs, IoT and embedded. What the company is witnessing is the convergence of these partners.

The event saw the attendance of more than 2,200 Red Hat partners, distributors, systems integrators,

independent software vendors (ISVs), original equipment manufacturers (OEMs), and solutions providers.

Habgood stated that there has been a rapid digital transformation in the APAC region and the pandemic has only accelerated it. He added, “Culture is a key for success in digital transformation. Without having the right culture, digital transformation is not possible.”
