

Build your own Cloud Storage System using Nextcloud

This article presents a simple tutorial on how to set up your own cloud storage on your Windows machine using Nextcloud, along with a comparison between ownCloud and Nextcloud.

Why waste valuable storage space on your PC or phone when you can store documents and media in the cloud? Computer systems have been steadily moving away from local storage to remote, server based storage and processing – which is also known as the cloud.

Is cloud storage really needed?

Cloud storage is ideal when you want to access your personal files, documents, videos or images quickly. With the cloud, your data is stored on hardware that is in a remote physical location, which can then be accessed from any device over the Internet. Cloud storage delivers a cost-effective, scalable alternative to storing files in on-premise hard drives or storage networks.

If you don't yet have a service for storing and syncing your data in the cloud, you should seriously consider using one.

Nowadays we are highly dependent on Google Drive or Dropbox to backup important data, but these share one major drawback – they are third-party choices that you have to trust with your data. So rather than trusting third party software, you can build your own cloud storage using Nextcloud.

Nextcloud is a suite of client-server software for creating and using file hosting services. It is one of the most popular free and open source cloud storage services available right now. It has been growing fast, and has gained a lot of popularity in recent years.

An interesting fact about Nextcloud is that it was originally a fork of the

ownCloud project, NextCloud Hub. It's a content collaboration platform, offering chat, office, shared calendar and many more – all of it in the same place.

Nextcloud vs ownCloud

1. ownCloud offers a set of exclusive features only to its premium subscribers, whereas Nextcloud offers a complete set of features to both community and enterprise editions. The premium subscription for Nextcloud includes support for only enterprise deployments.
2. ownCloud users can only use some of the features in the commercially-licensed enterprise edition. On the other hand, Nextcloud components are available under the free AGPLv3 license.
3. Nextcloud is one step ahead with
