

Redis Labs raises US\$ 100 million, and also achieves APN advanced technology partner status

Redis Labs has announced that it has raised US\$ 100 million in series F funding at a company valuation of more than US\$ 1 billion. The investment was co-led by Bain Capital Ventures and TCV, with participation by the company's existing investors Francisco Partners, Goldman Sachs Growth, Viola Ventures, and Dell Technologies Capital. After this funding, Redis Labs has now raised over US\$ 246 million to-date.

Ofer Bengal, co-founder and CEO at Redis Labs, said, "The unprecedented conditions brought on by COVID-19 have accelerated business investments in building applications that require real-time, intelligent data processing in the cloud. During this time, Redis has become even more critical to our customers, partners, and community. We will continue to invest in strengthening our community footprint, advancing the Redis technology, and helping our users to do more with Redis."

The company said that at present enterprise data is distributed, siloed and increasing in volume. For companies of every industry to maximise and leverage the power of this data, Redis Labs is delivering a real-time data platform that allows them to manage, process, analyse and make predictions as per the company. It added that this will improve their customers' experience and drive their business forward.

Redis Labs has also achieved advanced technology partner status in the Amazon Web Services (AWS) Partner Network (APN). The company received the designation in part by demonstrating verifiable success with customers including SonyLiv, Freshworks, Vungle, Etermax, and Branch Financial, deploying Redis Enterprise Cloud on AWS.

The advanced tier is the highest designation that an APN technology partner can achieve in the programme. To achieve this designation, Redis Labs has demonstrated significant investments in technical proficiency, proven experience building software solutions on AWS, and a track record of delivering excellent customer experiences.

"Achieving APN advanced technology partner status represents another important step in Redis Labs' commitment to give customers choice and align with their cloud journey," said Jason Forget, chief revenue officer and general manager at Redis Labs.

SUSE set to triple business in Asia Pacific and Japan by 2023

SUSE, the world's largest independent open source company, has announced that it is set to triple its business across the Asia Pacific Japan (APJ) region in the next

three years. This is following the company's positive performance in 1H FY2020, which saw an increase of 22 per cent in annual contract value (ACV) bookings as compared to the first half of the previous fiscal year. The company's cloud business also saw a massive gain of 75 per cent in 1H FY2020.

To support this success and reach the next phase of growth, SUSE has appointed Phillip Miltiades as president for APJ. Based in Sydney, Miltiades is responsible for leading and transforming SUSE with a focus on driving customer and partner business outcomes and success.

SUSE aims to drive broader and deeper adoption of innovative open source technologies in key verticals including financial services, automotive, public sector, high-tech and manufacturing. The company claims to heavily invest in people to service key focus markets, and further enhance its engineering, services and support presence across the region.

SUSE customers in the region include Air India, JK Tyre & Industries, Mahindra, Bank of Tokyo-Mitsubishi, Tokyo Institute of Technology, New South Wales Fire Brigades and Swinburne University of Technology.
