

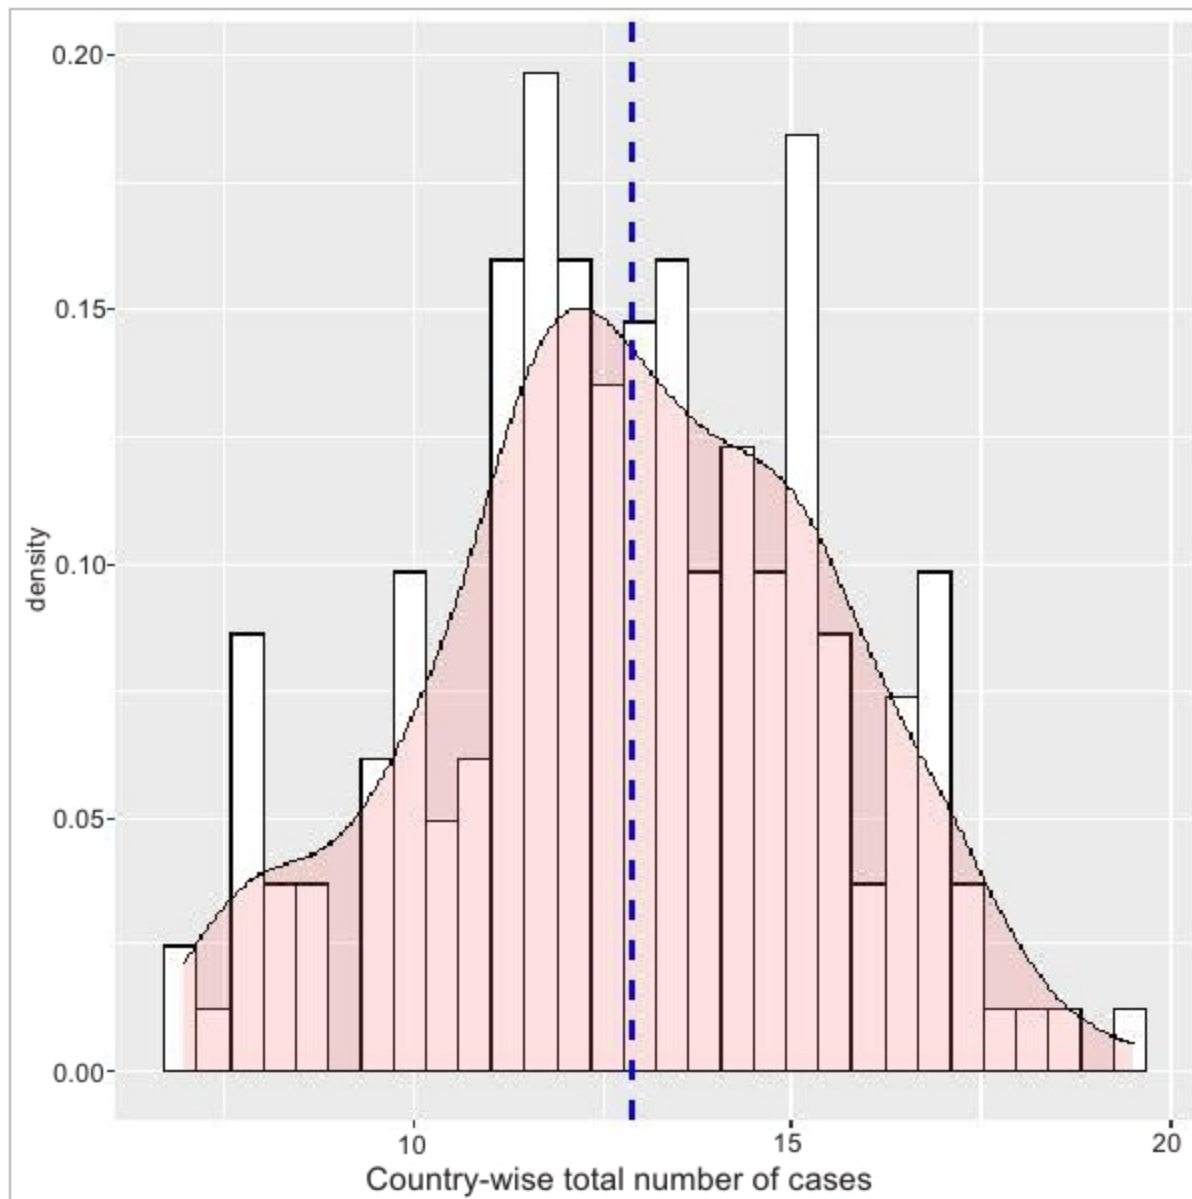

Figure 3: Density plot of global total cases

The coronavirus pandemic has opened up many options for different types of activities. Highly reliable structured data pertaining to the COVID-19 virus, data on treatment and spread of the pandemic, and so on are readily available on the Internet. Different communities are using this data to study and contribute to the worldwide effort to conquer the virus infection.

Here, I have shown the process of data acquisition and an outline of data analysis with R. I hope readers can explore various methods and use the knowledge in their own field of interest to contribute to the present war against the pandemic. **END** 🐧
