

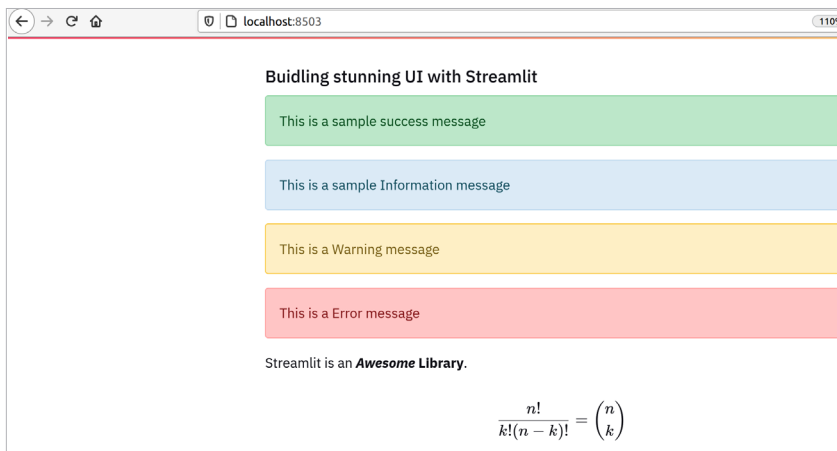

Figure 6: Streamlit markdown and LaTeX

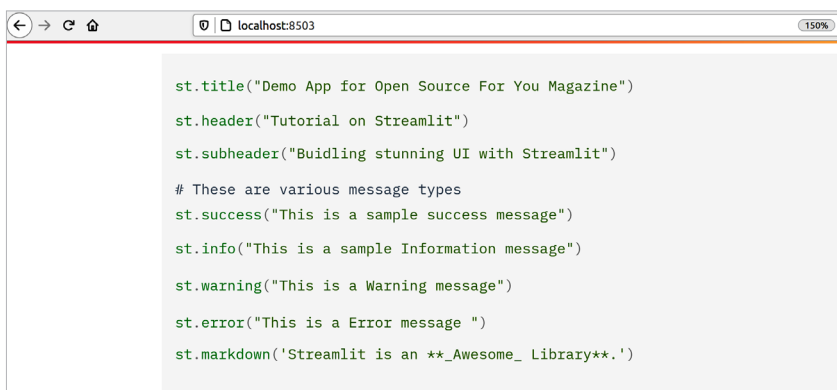

Figure 7: Displaying code with Streamlit

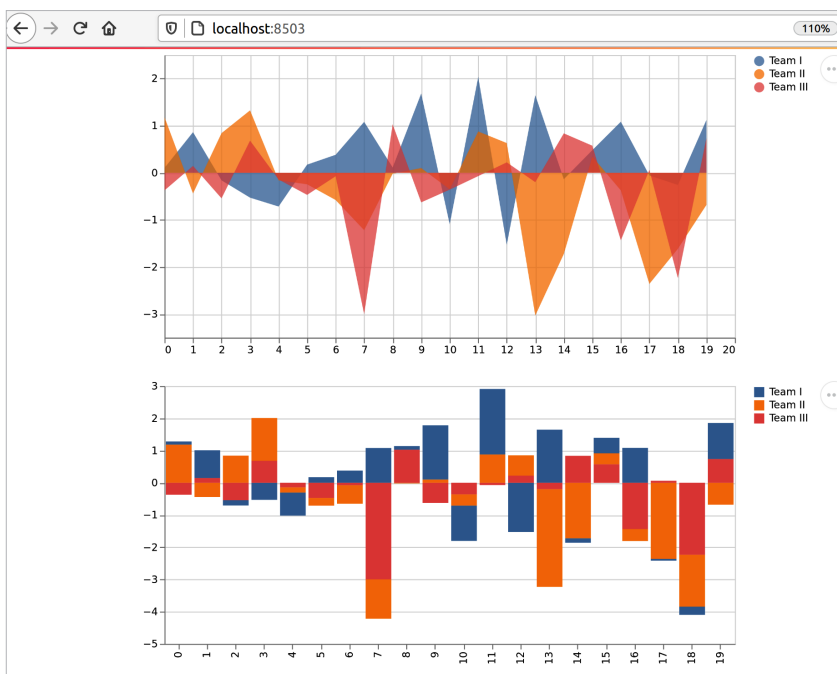

Figure 8: Streamlit: DataFrame and charts

enables you to add notifications of the following categories effortlessly:

- Success
- Info
- Warning
- Error

There are direct methods available to add each of these notifications:

```
st.success("This is a sample success message")
st.info("This is a sample Information message")
st.warning("This is a Warning message")
st.error("This is an Error message ")
```

You can observe in Figure 5 that these notification messages are rendered with attractive background colours.

Adding markdown: Streamlit allows you to write markdown, as shown below:

```
st.markdown('Streamlit is an **_Awesome_ Library**.')
```

Adding LaTeX content: LaTeX is a powerful documenting tool for scientific publishing. Streamlit allows you to write content formatted with LaTeX, as shown below:

```
st.latex(r''' \frac{n!}{k!(n-k)!} = \binom{n}{k} ''')
```

The output is shown in Figure 6.

Displaying code with Streamlit

If you need to display some code block, you can use the `st.code()` function to do it:

```
code = '''
st.title("Demo App for Open Source For You Magazine")
st.header("Tutorial on Streamlit")
st.subheader("Buidling stunning UI with Streamlit")
# These are various message types
st.success("This is a sample success message")
st.info("This is a sample Information
```
