

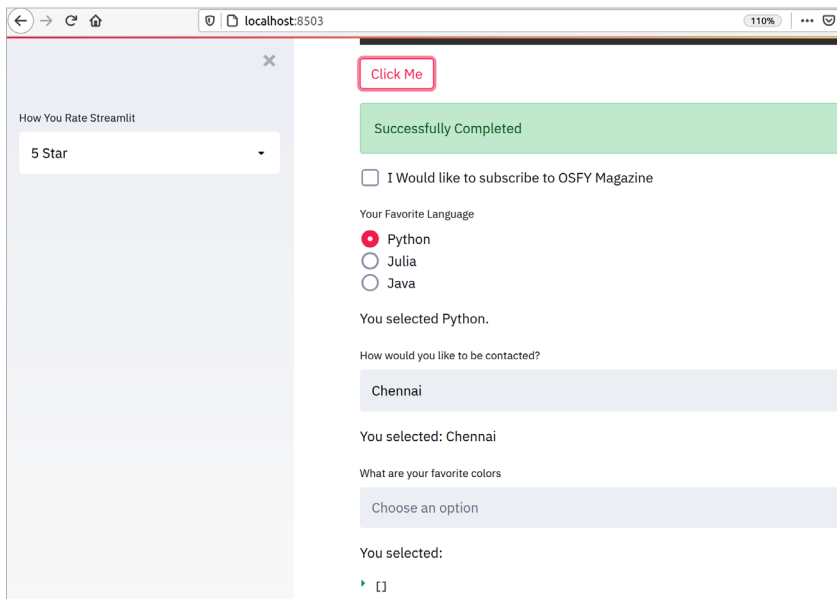

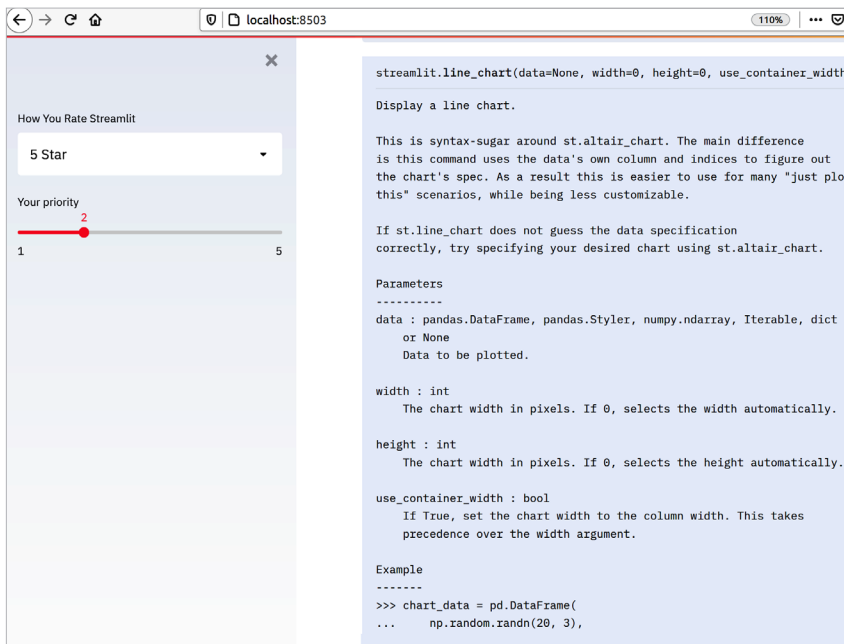

Figure 12: Streamlit sidebar

Figure 13: `st.help` facility

To add a *Multiselect* box, type:

```
options = st.multiselect('What are your
favourite colours?', ['Green', 'Yellow',
'Red', 'Blue', 'Purple', 'Magenta'])
st.write('You selected:', options)
```

A slider can be added simply with the following code snippet:

```
level = st.slider('Select Your
Expertise Level?', 1, 10, 6)
st.write("You are at Level:", level)
```

By: Dr K.S. Kuppusamy

The author is assistant professor of computer science at the School of Engineering and Technology, Pondicherry Central University. He has more than 14 years of teaching and research experience in academia and industry. His research interests include accessible computing, Web information retrieval, mobile computing, etc.

The number input, text input and text area can be added to get the input from the user:

```
num = st.number_input("Enter a Number")
txt = st.text_area("Your Feedback")
inp = st.text_input("Enter Your Name")
```

In many applications it would be easier to have a sidebar. In Streamlit, a sidebar can be easily added (Figure 12):

```
add_selectbox = st.sidebar.selectbox(
    "How You Rate Streamlit?",
    ("1 Star", "2 Star", "3 Star", "4
Star", "5 Star")
)
```

To get help information, `st.help()` can be used, as shown below:

```
st.help(st.line_chart)
```

This will display the help information about `st.line_chart()` (see Figure 13).

This article provides an introduction to Streamlit. The official documentation carries loads of easy-to-follow information (<https://docs.streamlit.io/en/stable/api.html>). Streamlit is a powerful library to build Web apps for your data science/ machine learning projects, and you can easily convert your existing scripts into awesome graphical user interface based tools with its help. Don't miss experimenting with the Streamlit library! **END** 🐧
