

Camunda launches Camunda Connect Partner Program

Open source process automation software provider Camunda has launched the Camunda Connect Partner Program. It will provide expanded support for organisations that develop and implement Camunda, sell Camunda, or include Camunda among their solution offerings

Jakob Freund, Camunda CEO, said, “Partners have long played an integral role in Camunda’s success, developing solutions for end-to-end process automation for their global clients. We’ve designed an all-new program to maximise our value in helping partners grow. We’re increasing our investments and expanding our coverage to help partners improve their skills and create powerful, profitable value-added solutions for their customers.”

The Camunda Connect Partner Program is designed for several partner categories, each focused on providing the right mix of support and resources critical for success. The program will also help sales partners resell the Camunda Platform and provide services to clients and technology partners.

Scott Francis, CEO of BP3 Global, said, “Automation has raised the stakes of what’s possible in delivering great customer experiences. BP3 is helping companies around the world find a faster way with automation solutions that improve their accuracy, speed and productivity. With Camunda, we gain a powerful, standards based approach for end-to-end process automation, one that builds upon an open, scalable architecture that maximises our clients’ time to value.”

With Camunda Connect, the company has also unveiled a new partner enablement program that is exclusive to program participants. Partners will receive a range of tools and resources depending on their level of partnership. These include marketing and sales tools, access to technical resources, and training programmes.

KITE releases FOSS based operating system

The Kerala Infrastructure and Technology for Education (KITE) has released a new, customised free and open source software (FOSS) based operating system called KITE GNU-Linux Lite 2020. It will feature on the student laptops being provided as part of the Vidyashree scheme by the state government.

The OS is based on the Ubuntu free software platform and comes preloaded with software that ranges from office packages, language input tools, database applications, DTP-graphics image editing software, sound recording and video editing packages, programming IDEs (integrated development environment), and scratch visual programming. It also has utility packages such as glImage Reader that provide image-to-text conversion, as well as a vast collection of Malayalam Unicode fonts and a dedicated English-Malayalam dictionary.

The installation assistance will be arranged through the Little KITEs student club units in schools. There is an option of using the Lite version software through a pen drive without the need for actual installation.

Yugabyte raises US\$ 48 million in funding

Yugabyte has announced a US\$ 48 million funding round led by Lightspeed Venture Partners with additional participation by Greenspring Associates, Dell Technologies Capital, Wipro Ventures and 8VC. It comes on the heels of a US\$ 30 million capital raise announced in June 2020. The round brings Yugabyte’s total funding to US\$ 103 million.

The company said that the funding will be used to expand Yugabyte’s R&D, sales and customer functions in the EMEA and APAC markets. To support its aggressive expansion plans, Yugabyte will double its headcount in 2021.

Kannan Muthukkaruppan, co-founder and president of Yugabyte, said, “Today’s business environment demands flexibility and elasticity from database solutions, and distributed SQL is now critical for any organisation where developer productivity and application uptime are top priorities. YugabyteDB makes something as fundamental and feature-rich as PostgreSQL truly cloud native, resilient, elastic, and distributed.
