

Cloud Custodian has been downloaded more than two million times since August 2020, is part of the CNCF Sandbox, and has almost 300 active contributors including Amazon, Microsoft and Capital One.

Open source service market to grow at a CAGR of 24.2 per cent during 2020-2025

The open source service market is expected to reach a CAGR of 24.2 per cent during 2020-2025 as per a report by ResearchAndMarkets. The report added that companies can save on operational and implementation costs by using open source solutions.

For revenue generation, vendors in the open source market are charging for add-ons. But even after paying for add-ons and services for security hardening, open source products are usually much cheaper than closed source alternatives.

Open source software vendors offer 24x7 support along with services that range from consulting and training to implementation and maintenance. This helps to solve issues quickly.

The report added that North America is expected to capture the largest share. It is witnessing growth in the open source service market due to prominent market players and a high adoption rate of new technologies. An increased investment in cloud technology is also expected to drive the growth of the open source service market.

SUSE appoints Neeraj Athalye as managing director

SUSE has announced the appointment of Neeraj Athalye as its managing director for India. Athalye brings 25 years of experience from organisations like

Geometric Software, MatrixOne (now Dassault Systems) and SAP, with accomplishments spanning greenfield projects and modernising architecture, as well as other high-impact endeavours.

Athalye said, “As India pivots to becoming a global enabler of digitally native products and services, this is a great time to contribute to its growth story. I am keen to build a customer-centric organisation with innovation at its core. With existing Indian brands already leveraging SUSE solutions, I look forward to

accelerating their open source adoption and building a robust DevOps practice across strategic system integrators and partners.”

SUSE India is focused on strategic sectors such as banking, manufacturing and ITES. The three focus areas for SUSE are SUSE Rancher, the open source multi-cluster orchestration platform; SUSE Manager; and SUSE Linux Enterprise Server, a modular operating system that paves the way for IT transformation in the software-defined era.

Phillip Miltiades, president of SUSE Asia Pacific and Japan, said, “Known for his ability to build innovation frameworks and lead some of the most iconic and resilient teams in the industry, Neeraj will bring to SUSE the ability to drive results for our customers. Following the acquisition of Rancher, it is a great time to further SUSE’s impact in India. Neeraj will be a great leader for both the existing team and the team he will hire.”

Sysdig appoints Dan ‘Pop’ Papandrea as lead of the open source community and ecosystem

Dan ‘Pop’ Papandrea has been appointed as lead of the open source community and ecosystem at Sysdig, Inc. Papandrea will be responsible for growing the adoption and contributions for open source projects created by Sysdig, including Falco. Falco joined the Cloud Native Computing Foundation (CNCF) in 2018 and moved to an incubation-level hosted project in January 2020. Papandrea will focus on streamlining open source adoption and contribution, and helping users share their best practices.

Sysdig said that since moving to the CNCF Sandbox, contributors to Falco have grown 238 per cent. The Falco maintainers and community spent the last year focused on the project’s governance, and now the team will focus on contributions and adoption.

Prior to this, Papandrea was the field CTO for Sysdig. Pop has spent the last four years at Sysdig learning and contributing to the orchestration and container ecosystem, as well as working with customers to understand their unique environments. Pop is an active member of the cloud-native open source community, a CNCF ambassador, a CD Foundation ambassador, a Certified Kubernetes Administrator (CKA), and a Kubernetes contributor.

Prior to Sysdig, he was a lead solution architect for Hewlett Packard Enterprise’s Helion business unit, as well as the director of IT, principal solutions architect, and product manager at SS&C Technologies.
