

17hats

This app is offered by 17hats and can help maintain any small scale business. It can help to organise, manage and grow the business using a mobile device. It keeps you in touch with your business while you are on the go.

The main features of this app are:

- The dashboard lets you check recent client activity, pending documents and upcoming tasks.
- Quickly respond to any business email using various email templates.
- Create and edit contacts and projects, and quickly access details like email addresses, phone numbers and locations, to name a few.
- Easily view the calendar and adjust it, on the go.
- Send documents quickly, countersign a contract, or view a completed questionnaire.
- Workflows can be easily assigned to leads and clients.

Odoo

Offered by Odoo S.A., this suite of open source business apps covers most business needs like CRM, e-commerce, accounting, inventory, point of sale, project management, and more. The mobile app has been carefully built to ensure quick and seamless user adoption. Odoo gives the flexibility to add apps whenever a new need is determined according to the growth of a company, adding one app at a time as the business evolves and the customer base grows.

The main features of this app are:

- Configure the price list at the backend.
- Track products of the customers.
- Manage and publish banners separately.
- Product sliders and slider modes.
- Configure the selection of products, either automatic or manual.
- Manage push notifications.
- Configure action to trigger on customer's product/category/custom collection page.
- Manage unlimited featured product categories using the app builder.
- Home page with highlights of the popular categories.

vCita

This app is offered by vCita. It helps in managing your day-to-day activities like a pro and lets you build the business that you need. It helps with appointment scheduling, billing and invoicing, client management and even marketing! Simply sign up, log in and stay connected to your business and your clients 24/7. vCita lets you provide a seamless customer experience, allowing leads and helping to book appointments, paying for services, corresponding with other businesses

and sharing documents via your website, Facebook page or directly from Google search.

The main features of this app are:

- Calendar, scheduling, client management, payments and marketing.
- Get more bookings from your website, Facebook page or through Google.
- Send friendly automated meeting reminders to reduce no-shows.
- Actionable invoices and payment reminders prevent any unpleasant collection calls.
- Client records with detailed client cards help create relationships.
- Engage with clients and offer last-minute deals with coupons and campaigns.

mHelpDesk

Offered by mHelpDesk, this app saves time and lets you stay productive even when you are not in the office. It gives you the ability to manage schedules, view job progress, check in on field technicians, send estimates and invoices, and much more. It can also make communication between office and field staff a breeze with real-time updates, and can quickly create estimates from templates on your mobile device on-the-fly. You can email or print these for your customer immediately to get ahead of the competition. mHelpDesk Payments helps you to get paid faster, easier and on the go, and also integrates with other payment options (PayPal, Stripe and Authorize.NET). This app also works offline and syncs with the database whenever it is online.

The main features of this app are:

- Work online or offline; with the offline feature, your team can continue to work even when Wi-Fi or a cell signal isn't available. The app automatically syncs as soon as a connection is found.
- Simplified scheduling lets you check your own schedule or your team's schedule, and create new jobs and appointments directly within the app. mHelpDesk can schedule with Google Calendar for extra efficiency.
- Create and send estimates on the go, using professional templates that you've selected and customised. When the work is done, you can turn the estimate into an invoice with a few taps.
- Get invoices paid faster by emailing professional-looking invoices directly from your phone.
- Customer support can be done easily by keeping all your leads, as well as customer and job details, within the app. And with automated email and SMS (text) alerts, team members and customers can always have the latest customer information on job status.
