

Top 10 Open Source Repositories on GitHub 2020

GitHub hosts software for development and version control. The main repository can have many branches or forks. GitHub is widely used by developers to test code and to collaborate with other developers in the software development cycle. This article brings you the top 10 GitHub repositories.

Open source software (OSS) has been getting a lot of traction in recent years. Right now, there are approximately 200,000 open source projects worth billions of dollars, being worked on across the globe. Open source communities range from groups of ordinary people to associations of big companies.

In this article, we will go through the ten most popular open source repositories on GitHub this year.

1 Freecodecamp

This is one of the biggest repositories on GitHub because it offers newcomers the means to learn how to code effectively, for free. As the name suggests, it is a user-friendly and safe environment for coders to learn skills. Any learner can build his or her own project, learn to code and adopt best practices. Since its inception, the page has collected a massive 317,000 stars on GitHub. This community is the best example of OSS — a place where everyone can learn for free.

2 VS Code

Visual Studio is a free source code editor developed by Microsoft for Windows, Linux and MacOS. It is an all-purpose code editor, and its focus is to provide developers with a

single solution for all their coding needs, including editing and debugging. VS Code is an extremely well-liked open source repository on GitHub, with more than 107,000 stars and 19,000 contributors. This repository is used to work on code, and can also be used as a publishing platform. It gets updated every month with bug fixes, new features and some enhancements.

3 Flutter

This software development kit (SDK) made by Google is one of the fastest-growing open source communities on GitHub. It permits applications to be developed from a single codebase with a user interface toolkit. The applications created by Flutter are attuned with PC and mobile platforms, and their appearance creates aesthetic and efficient end user experiences.

Flutter is pushed by Skia, and the hardware accelerated 2D graphics library by Android and Chrome. It also employs a layered architecture for building applications, which allows developers to flawlessly add text, graphics, video and animated content as overlays without disturbing the source code. It is compatible with OS and Android, offering flexibility to the developer.

The Flutter GitHub page has over 100,000 stars and is hugely popular among users and contributors alike.
