

Benefits of using backup software:

- ➔ Backup software acts as a protection against power failure, abrupt power cuts, etc.
- ➔ The data is disaster-proof, more secure and safe once a backup is taken with multiple layers of security provided by the backup software.
- ➔ Backup software loads data easily, which saves a lot of time. Companies are spared from wasting time in managing the data.
- ➔ Lost files or loss of old versions of important files can reduce a company's profitability substantially. Backup software retains all the versions of a document.

10 best free and open source backup solutions**1 Areca**

Areca offers an open source backup support solution through GPL (General Public License). Users can choose the files set or the directory that has to be backed up, and also select the place where data can be stored. This software provides encryption of data, compression of files and other functions. Advanced backup modes are permitted to customers through Areca — for example, backup of delta, zip archives and basic copies of source files. This is a solution for both Windows and Linux.

2 AOMEI

AOMEI is a backup standard that provides a brief knowledge on user imaging, backup files, cloning disks, syncing files and optimised scheduling. Data transfer and the migration of the OS are assessed easily using clone systems, clone disks and clone partitions. It provides various sets of backup processes including a backup system, backup files, syncing files, backup disks and backup of partitions.

3 Bareos

Bareos is the acronym for 'Backup archiving recovery open source'. This backup software is a fork of the Bacula project. The software runs on a single computer and can back up different types of media, including tape and disk. Bareos enables IT admins to manage recovery, backup, and verification of computer data over a network of different kinds of computers, in a manner similar to Bacula.

4 Duplicati

Duplicati software is supported by Windows, MacOS and Linux, as well as a range of standard protocols, including SS, FTP, cloud services and WebDAV. It is useful if strong encryption is needed by the user. Licensed under the GPL, it gives users the ability to store encrypted, incremental, and compressed backups on cloud storage servers and remote file

servers. The software offers features like filters, deletion rules and bandwidth options to run backups.

5 EaseUS Todo

This software helps the user to back up single folders, files, drivers, partitions and full systems. Users have the capability to upgrade the clone disk from a smaller HDD to a large one. This tool permits users to get their systems back to their actual state using a recovery boot system.

6 FBackup

FBackup gives the options of advanced modes and wizard modes. Backups are saved on a local drive, network drive and portable disk. This software is preferred because of its multi-language interface.

7 Iperius

Iperius is used for backups in PCs and servers. It has two types of solutions — business and advanced. This software helps to back up data in a stable and reliable manner. The software is free and does not have a licence expiry.

8 Paragon

Paragon can create a partial and full-time recovery on backup system files. It offers advanced support for recovering the ISO image.

9 Unitrends

Unitrends includes backup software such as free VMware and Hyper-V. The free version can secure 1TB of data. Its five major software editions are: (i) Free Unitrends, (ii) Standards, (iii) Essentials, (iv) Enterprises, and (v) Enterprise Plus.

10 UrBackup

UrBackup is an open source network used for Windows and Linux backups. It has a client-server architecture. It uses a combination of backup files and images to achieve quick restoration of data with safety.

Backup software is designed to save organisations from any unforeseen event that may cause them to lose valuable data. It is like essential infrastructure that is a must for the smooth running of the organisation. It is not something that companies may choose to deploy, but is a necessary tool that they should possess irrespective of the size and scale of their business. **END**
