

WhiteSource offers support for JetBrains' PyCharm and WebStorm IDEs

WhiteSource has announced new WhiteSource Advise support for JetBrains' PyCharm and WebStorm integrated development environments (IDEs). WhiteSource Advise can now alert developers about vulnerable open source components from inside their PyCharm and WebStorm IDE. These seamless integrations empower developers to address open source security issues very early in the development process and resolve them easily, shortening release cycles, and saving valuable time and resources.

David Habusha, VP product at WhiteSource, said, "We're happy to continue to expand our shift left support for additional JetBrains IDEs. Now WhiteSource can help developers using PyCharm and WebStorm to quickly and easily address open source security issues by detecting open source vulnerabilities, and help to resolve them without having to leave their native environment."

JetBrains offers a number of developer tools, including Kotlin, the open source programming language that has become Google's preferred development tool for Android. With this new addition, WhiteSource now supports six popular environments, the top JetBrains IDEs (IntelliJ IDEA, PyCharm, and WebStorm), plus Visual Studio, Visual Studio Code, and Eclipse.

The transaction is expected to close in the first quarter of 2021, subject to customary closing conditions. Red Hat plans to open source StackRox's technology post acquisition. It will continue to support the KubeLinter community and new communities as it works to open source StackRox's offerings

Kamal Shah, CEO, StackRox, said, "We're thrilled to join forces with Red Hat, coupling the industry's first Kubernetes-native security platform with the leading Kubernetes platform for hybrid cloud, multi-cloud, and edge deployments. This is a tremendous validation of our innovative approach to container and Kubernetes security. Red Hat is an ideal partner to accelerate our vision of enabling organisations to securely build, deploy and run their cloud-native applications anywhere."

Red Hat OpenShift takes a layered approach to securing containers, integrating security throughout the container life cycle, from building, to deploying to running containers in mission-critical environments.

Quansight to join the OpenTeams network of OSS service providers

Quansight has announced that it has signed a deal with OpenTeams to accelerate the growth of its data science and machine learning consulting business. It will be joining the OpenTeams network of open source software (OSS) service providers.

Dharhas Pothina, director of consulting at Quansight, said, "Typically in a consulting company like Quansight, business development is mostly achieved by the executive team working with their personal networks. This is time consuming and can make it difficult to grow your business rapidly. By joining the OpenTeams market network, we can engage with a larger number of potential customers who are looking for the services we offer. The network also makes it easier to partner with other consulting companies when the project requires skills outside our area of expertise."

Open source software has reached mainstream adoption among enterprises due to its many benefits. The need for expert support has also increased. But finding, vetting, and contracting with the right experts for each of the open source libraries a company uses can be time consuming. OpenTeams provides a single source of qualified, expert support service for all open source software.

Allegro AI rebrands Allegro Trains as ClearML

Allegro AI, developer of the open source tool suite that helps data science teams manage the operations that drive machine learning labs, has announced the rebranding of its key product Allegro Trains as ClearML. This product will also have new features and an industry-first free hosted plan that gives data science
