

Top 10 Open Source Network Security Tools for Web Apps

Whether you are part of a startup dipping your toes into the field of Web apps or a full blown MNC working on multiple different projects, protecting your organisation's network and critical infrastructure is of paramount importance. In this article, I share with you the top 10 open source tools to handle the security of your network.

We are not even half-way into 2021 and the amount of data breaches, leaks and hacks that have occurred this year alone is dizzying:

- Ubiquiti Inc., one of the biggest IoT vendors, informed its customers about the breach of its system and the subsequent data leaks which exposed sensitive customer data such as names, addresses, emails and even passwords.
- Parler, the conservative social media app, also released a notification regarding a data leak in which nearly 20 terabytes worth of data was scraped by a hacker from its platform.
- Sociolark suffered a data leak in the same month due to an unsecured database that exposed sensitive account details of 214 million social media users from Facebook, Instagram and LinkedIn.
- Pixlr, a free photo-editing app, became a victim of hacking, which led to 83 million user records getting exposed.
