

ML/AI-ops platform empowers the user to use the best data analytics framework at execution time.

Alexander Alten, founder of Infinimesh and executive president of Infinite Devices, said, “Security gaps and weak points in open source platforms are always a major risk. Our open source platform Infinimesh is the first cloud native, scalable IoT platform that guarantees 100 per cent data privacy and data compliance for Wayang.”

Redis Labs appoints Taimur Rashid as chief business development officer

Redis Labs has named Taimur Rashid as the company’s chief business development officer. He brings nearly two decades of experience in incubating new market opportunities and expanding the market reach for enterprise software companies, having worked the past 15 years with leading cloud service providers.

Rashid will be responsible for leading cross-functional projects to nurture and grow markets, including the emerging role Redis is playing in artificial intelligence use cases and the accelerated adoption of cloud-native architectures by Global 1000 companies. He will help the company continue to deliver native managed services that enable customers to engage deeper with Redis and grow into premium services.

Rashid said, “I’ve admired how Redis Labs has not only expanded the capabilities of Redis to power modern applications, but also developed new technologies to help enterprises explore data layer strategies that enable real-time use cases. I’m excited to not only make it easier for our partners to sell and help our customers grow with Redis, but also for businesses to build on top of Redis too.”

G7 CR Technologies named GitHub Advanced Channel Partner

G7 CR Technologies India Pvt Ltd has announced that it has become a GitHub Advanced Channel Partner, which will give its clients access to the GitHub Enterprise platform. Enterprise developers will not only be able to work within a private environment but also connect with the developer community.

Dr Christopher Richard, MD and chief cloud architect, G7 CR Technologies India Pvt Ltd, said, “DevOps is a key offering from G7 CR, as today’s businesses rely heavily on speed. This partnership is intended to bring the best skills and tools to enable faster, automated and secure product life cycles. GitHub and its Enterprise offering enable organisations to bring the best developer experience within their company’s firewall, and we can help bring the expertise to ensure large organisations benefit from it.”

Recent research indicates 52 per cent of organisations think people and skills issues are the biggest obstacle to adopting modern software engineering practices in-house. The company said that with access to the GitHub Enterprise platform, G7 CR Technologies will be helping its clients reduce time to market for business-critical development projects.

Maneesh Sharma, country manager, GitHub India, said, “As a GitHub Advanced Channel Partner, G7 CR Technologies will help scale adoption of GitHub Enterprise to provide businesses with the most advanced developer experience to power innovation. GitHub and G7 CR Technologies share a similar goal of modernising software development and bringing world-class tools to customers.”
