

the Pods page displays the container names. For example, connect to the validator container with the following command:

```
$ kubectl exec -it $(kubectl get pods | awk '/sawtooth-0/{print $1}') --container sawtooth-validator -- bash
```

After connecting to the container, you can use `ps` to verify that the Sawtooth component is running.

```
root@sawtooth-0# ps -A fw
```

In the `sawtooth-validator` container, the output resembles the following example:

```
PID TTY STAT TIME COMMAND
77 pts/0Ss 0:00 bash
96 pts/0R+ 0:00 \_ ps -A fw
1 ?Ss 0:00 bash -c sawadm keygen && if [ ! -e config-genesis.batch ]; then sawset genesis -k /etc/sawtooth/keys/vali
27 ?Sl 0:17 /usr/bin/python3 /usr/bin/sawtooth-validator -vv --endpoint tcp://10.96.15.213:8800 --bind component:tcp:
```

Examining Sawtooth logs

The Sawtooth log files are available on the Kubernetes dashboard.

- From the dashboard's overview page, click on the Sawtooth pod name.

- On the Sawtooth pod page, click on the *Logs* button.
- On the *Logs* page, select the Sawtooth component. For example, to view the validator log messages, select `sawtooth-validator`.

Stop the Sawtooth Kubernetes cluster

Use the following commands to stop and reset the Sawtooth environment:

- Log out of all Sawtooth containers.
- Stop Sawtooth and delete the pod. Run the following command from the same directory in which you saved the configuration file.

```
$ kubectl delete -f sawtooth-kubernetes-default.yaml
deployment.extensions "sawtooth-0" deleted
service "sawtooth-0" deleted
```

END
