

DVD OF THE MONTH

Enjoy the best of Linux.

Debian 10 Buster

Debian is one of the world's oldest Linux distributions and, in terms of the number of developers involved, also one of the largest. Around 1,300 contributors worked on Debian 10, which was released on July 6, 2019. Debian provides more than a pure OS; it comes with over 59,000 packages of precompiled software bundled up in a nice format for easy installation on your computer. The latest release includes enabling AppArmor by default and running GNOME Shell on Wayland. This version of Debian will receive five years of support, thanks to the project's long-term support team. We have bundled the 64-bit live edition of the GNOME desktop environment.

Feren OS 4.15

Feren OS is a free replacement for Windows and macOS with some of the best that the Linux community can offer in terms of customisation, applications, and much more – all in one package. Feren OS comes with a simple yet beautiful interface. It is secure, continuously updated, fast and complete with all the tools you will need for daily operations. It has an office suite, a secure Web browser, as well as email and media applications all pre-installed, apart from the many, many more apps and games that are available in Store. Feren OS is an open source Linux distro with its own page for the source code, which can be found at <https://github.com/feren-OS/>.

What is a live DVD?

A live CD/DVD or live disk contains a bootable operating system, the core program of any computer, which is designed to run all your programs and manage all your hardware and software.

Live CDs/DVDs have the ability to run a complete, modern OS on a computer even without secondary storage, such as a hard disk drive. The CD/DVD directly runs the OS and other applications from the DVD drive itself. Thus, a live disk allows you to try the OS before you install it, without erasing or installing anything on your current system. Such disks are used to demonstrate features or try out a release. They are also used for testing hardware functionality, before actual installation. To run a live DVD, you need to boot your computer using the disk in the ROM drive. To know how to set a boot device in BIOS, please refer to the hardware documentation for your computer/laptop.
