

MRMS: Your Personal Assistant App!

Play the MRMS app game and have fun managing your personal and professional activities.

At some point in our hectic lives, most of us have wished for more than 24 hours in a day. Unfortunately, that is not possible. But think again! Are you really wishing for a longer day or do you actually wish for a better managed life where you are not always chasing deadlines, missing important meetings and skipping precious family time to complete pending office work?

Sprin Technosys recently launched an app at Open Source India 2018 that offers the perfect solution to those of us who are strapped for time. It not only solves your dilemma of smoothly balancing your personal and professional activities but also helps you manage your relationships, while providing motivation and rewards for successfully balancing your life. You must be wondering what exactly this app does, and how it will help you tie up all the loose ends in your life.

The MRMS app is a personal assistant that can not only be used by an individual but also by any type and size of organisation for the hassle-free management of all their departments, workforce and other stakeholders.

Another great factor is that the MRMS also takes away the hassle of inputting each task because this app does it automatically, on your behalf. All you have to do while attempting each task (you can call it your mission) is take a selfie. Yes, a selfie! The MRMS app offers this unique live biometric face recognition feature for playing the game and feeding your activities. This face recognition authentication and verification feature also ensures safety by giving only verified users access to the app in order to manage their activities.

Why the MRMS app uses gamification

Gamification applies behaviour-motivating techniques from traditional and social games to non-game environments. An effective gamification program actually looks more like a loyalty program to help achieve real business goals when it is expanded beyond points, badges and leader boards. According to the recent Gallup Employee Survey and the State of the Global Workplace reports, without gamification, only 13 per cent of employees are engaged with their work, while 24 per cent are actively disengaged and 63 per cent of employees are not engaged at all. These are really worrisome numbers! Various surveys conducted across the globe have confirmed that using a gamification platform has not only increased the engagement levels at work for 91 per cent of employees but has also increased the productivity level of 90 per cent of workers and improved awareness of co-workers' goals and tasks for 86 per cent of employees. The companies using a gamification platform admit that the engagement of their employees has increased by between 48 per cent and 72 per cent.

What is the MRMS app?

It's your personal assistant app that encourages and appreciates your daily activities.

What can you do with the MRMS app?

You can use it to plan, allocate and manage your daily professional and personal activities, and also integrate it with your existing planner and scheduler apps.

Who can use the MRMS app?

- Working professionals
- Students
- Job seekers
- Businesses/organisations
- Home makers
- Apartments/community services

Using the MRMS app to manage professional activities

At present, there are thousands of apps available in the market that help working professionals and different office departments like HR, CRM, marketing and admin, among others to manage their activities, keep track of time and tasks, etc. But the problem here is that to have a smooth work life balance, you have to download multiple apps. Yes, there are solutions for that as well— all-in-one enterprise solutions. These not only save time but also make your task management hassle-free.

How the MRMS app manages personal activities

While designing the app, the team at Sprin was convinced that it didn't want to limit the capabilities of the MRMS app to managing the professional activities of businesses and organisations only. The team wondered why it couldn't develop a similar solution for managing personal activities? As a result of this, MRMS is also available for people who seek to manage their personal activities like their daily to-do lists, travel plans, kids' education and extra-curricular activities, as well as track other family members' activities like doctor visits, fitness levels, entertainment choices, etc, apart from managing house help and visitors.

What's next with the MRMS app?

MRMS has already assisted AI and machine learning technologies to recognise and to predict performances and activities that address future needs. Going ahead, the company is in the process of implementing deep learning, and is aiming to make MRMS a complete AI solutions app. **END**
