

Q What should new businesses that are considering open source keep in mind?

The most important point to keep in mind is that they should actively contribute to the open source community in addition to being a consumer. Businesses could be a member of one or more open source communities and should actively encourage their teams to contribute to open source technologies. Being a consumer is not enough; firms need to have skin in the open source game to sustain the benefits.

Q What is your advice to those interested in contributing to open source?

Contributing to open source is not for everyone. They need a social mindset.

They need to be selfless. There is no room for ego in an open source community. We all know that everyone has a goal – it is about how noble that goal is. Organisations that recognise that knowledge sharing in a diverse group is essential for innovation, benefit the most.

Q Before we wind up this chat, let's talk buzzwords, starting with 'Blockchain'.

Blockchain was invented for a specific purpose; later on, it was adapted as a distributed ledger to digitally execute multi-party transactions. IBM joined hands with the Linux Foundation in 2016 to establish the Hyperledger open

source project for Blockchain and related tools. Blockchain is expected to revolutionise financial, logistics, supply chain management industries as it opens up new avenues for innovation.

Q And lastly, what are your views on 'Automotive IoT'?

Open source in automotive is becoming increasingly popular today. As IoT frameworks evolve and security services mature, we see Automotive organisations collaborating and innovating in open source to build next generation connected vehicles. Those of you interested in this space are encouraged to follow the Eclipse Automotive Working Group under the Eclipse Foundation. **END** 🐼

THE BUSINESS MAGAZINE FOR ELECTRONICS INDUSTRY

Launched in February 2007, Electronics Bazaar, India's first B2B magazine aims at promoting the electronics industry. It covers the latest products, news, views, insights, opinions, and market trends from electronic components, products and machinery to manufacturing equipments segments.
