High-speed, solid-state drive from iBall

Leading consumer electronics manufacturer iBall, which is known for its innovative products, has launched a new solid-state storage device called the Phantom. The drive provides smooth, high speed storage. Equipped with the new-generation 3D NAND Flash and turbo boost SLC cache technology, the drive improves the performance of the PC considerably.

The SSD enhances productivity with seamless data transfers, reduced loading times and faster boot up. As compared to conventional hard drives, the company claims that the iBall SSD has a 10x faster boot-up time, shutdowns and application responses. The boot-up drastically reduces loading time, and ensures seamless transitions and transfers.

Being shock- and vibration-proof, with no movable parts, the device is also armed with the TRIM command, error correction code, RAID capabilities and the SMART system, which ensures good data transmission performance.

It comes with a read speed of up to 500MB, a write speed of up to 430Mbps for 120GB and up to 500Mbps for 240GB and 480GB, making it useful for desktops and notebooks.

The iBall Phantom is available in three variants – 120GB, 240GB and 480GB, via leading retail and online stores.

A 5-port, fast Ethernet switch from Digisol

Digisol, a subsidiary of Smartlink Holdings Ltd, has released its new, fast Ethernet PoE unmanaged switch – the DG-FS1005PH-A. The switch provides both data connections and electrical power to PoE enabled devices via just one cable, without modifying the existing Ethernet infrastructure.

The DG-FS1005PH-A supports the DIP switch, which is capable of extending Ethernet connectivity up to 200 metres at a 100Mbps link speed for PE ports to ease video surveillance requirements. The device also enables VLAN mode, depending on the DIP switch combination set on it, which can save significant deployment costs, time and effort.

The DG-FS1005PH-A offers five 10/100Mbps Ethernet ports, of which four

ports are Power-over-Ethernet (PoE) compliant to IEEE 802.3af/IEEE 802.3at. The switch uses store and forward packet switching technology, which ensures reliable data transfer. It supports automatic MDI/MDI-X detection, eliminating the need for a crossover cable or for dedicated uplink ports.

With the separate PoE LED status indicators, the devices connected to the switch can be easily identified. The device offers a backplane capacity of 1Gbps, and data transfer at an average of 200Mbps per port at full duplex mode, allowing every node to perform at maximum potential.

The Digisol DG-FS1005PH-A switch is available via retail stores.
