

If you don't have much knowledge about HTML, CSS and JavaScript or jQuery, there's no need to worry because the Bootstrap framework is easy to learn and use.

Stable release	4.1.3
Licence	MIT License (Apache License 2.0 prior to 3.1.0)
Website	https://getbootstrap.com/
Written in	HTML, CSS, Sass, Less and JavaScript
Main features	• Mobile-first design philosophy • Bootstrap 4 supports all the latest versions of Google Chrome, Firefox, IE8 and above, Safari and Opera • Sass and Flexbox support

To try Bootstrap and execute it yourself, go to https://www.w3schools.com/booTsTrap/tryit.asp?filename=trybs_default&stacked=h.

Semantic UI

Semantic UI is basically used for 3D animation and provides various components for real-time debugging of output so that your code reveals what it's doing in the mobile.

The Semantic UI framework is easy and provides an awesome user interface package using LESS. Semantic UI supports IE (9+), Chrome (latest), Firefox (latest) and Opera (12+). In this framework, we can disable state on icons and images that can be formatted in different sizes and colour codes.

Stable release	2.4
Licence	Free and open source (MIT)
Website	https://semantic-ui.com/
Supported OSs	Linux, Mac, Windows
Main features	• Simplified debugging with performance logging • Intuitive JavaScript • 50+ UI components • 3000+ theming variables

Foundation

Foundation is another very powerful UI framework that is available as open source. It is a lightweight and scalable UI framework that's used all over the Web. Foundation also provides the 12-column grid responsive layout. We can use Foundation in any CMS tool like Drupal.

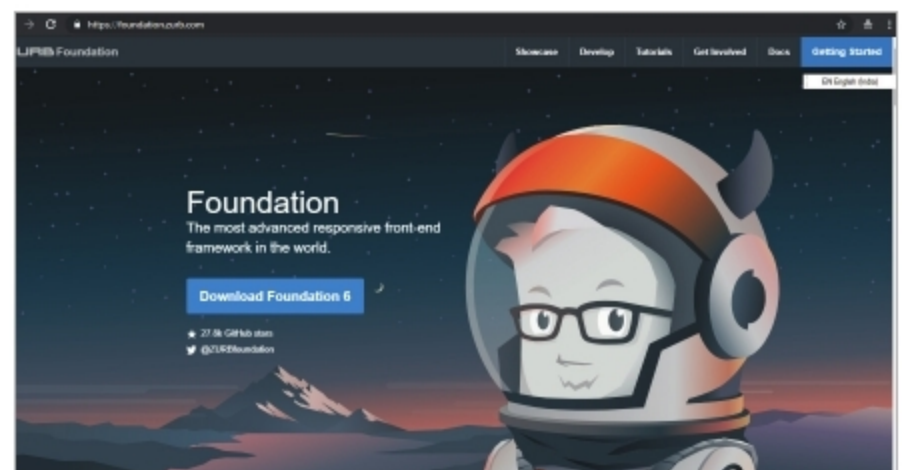

Figure 5: Foundation

Foundation motivates us to write the best code for a good looking website. It abstracts repeatable elements in CSS, such as colour, margins, etc, into Sass variables.

Stable release	6.4.3
Licence	MIT License
Website	https://foundation.zurb.com
Written in	HTML, CSS, Sass and JavaScript
Main features	• Foundation 6 gives the best practices for rapidly prototyping a responsive site • XY Grid is the powerful, 2D default grid • Supports ES2016 module-based architecture powered by Webpack • Has support for smooth scrolling • Free training
