Dual band wireless router from Digisol

Digisol, a leading provider of networking products, has announced the availability of its next generation wireless router – the DG-BR5411QAC. The router operates on both 2.4GHz and 5GHz (dual band), and has a transmission speed of up to 1200Mbps.

The device comes equipped with the next generation Wi-Fi standard IEEE802.11ac that facilitates seamless surfing and the sharing of HD videos, movies, music and documents.

The router uses intelligent antenna technology to transmit multiple streams of data, enabling the user to receive wireless signals at a greater speed.

The router offers a powerful bandwidth across large areas, allowing the connection of multiple devices, making it more suitable for homes and small offices. It comes with a QoS (Quality of Service) prioritisation technology, which analyses and separates multiple data streams based on sensitivity to delay, allowing multiple applications to stream smoothly across the network.

The router also supports wireless 802.11b/g/n along with security protocols like WEP, WPA and WPA2. The device comes with Wi-Fi Protected Setup (WPS), which simplifies wireless client setup procedures, and offers robust security using WPA2-PSK with AES. This enhances the security of wireless networks and protects sensitive data from hackers. The 64-/128-bit WEP encryption provides wireless network confidentiality.

The DG-BR5411QAC wireless router is available at all leading retail and online stores.

Wireless speaker with 'Magic Button' from Logitech

Logitech has unveiled its latest Bluetooth speaker, Boom 3, under its own popular brand, Ultimate Ears.

The speaker has an IP67 water resistance rating, for significant exposure to water and dust. Its capability to float in water makes it perfect for outdoor activities.

The most interesting feature of the device is the 'Magic Button' on the top to control the music, enabling you to pause, skip and play tracks directly from the device. The cylindrical shaped speaker comes with a repositioned USB port to make charging a bit easier.

Featuring Ultimate Ears' unique audio processing,

the speaker produces clear and balanced audio at every volume level that radiates evenly in all directions, claims the company.

Boom 3 runs on the battery of electric cars, which makes it stay powered and live for 15 hours on a single charge. The device is compatible with a 'Power Up' charging dock, sold separately, ensuring music on the go. The speaker can be paired with up to eight Bluetooth enabled source devices at the same time with a range of play of up to 45m (150 ft).

The Ultimate Ears Boom 3 comes in black, blue and red, and is available via online and retail stores.
