

Yet Another Top Ten List *of* Popular Programming Languages

This is that time of the year when we make lists. So here is yet another list of the top ten most popular programming languages. This is however a list with a difference. It is not dependent on the author's personal preferences, but based on criteria outlined in the article itself.

In this article, I will provide three different lists of programming languages for professionals with different needs. The first list will use the selection criterion of popularity. The second list will feature programming languages that gained in popularity in the four most popular rankings of languages (the TIOBE Index, the RedMonk Programming Language Rankings, the PYPL or Popularity of Programming Language Index, and the IEEE Spectrum Ranking of Programming Languages) over the past three years. The criteria for selecting programming languages for the third list are similar to the first list, with the additional parameter being programming languages that had their first release in the last ten years.

The top 10 programming languages for 2019 in terms of popularity are:

- Java
- C
- C++
- Python
- C#
- PHP
- JavaScript
- Objective-C
- R
- Swift

In this list, Objective-C and R are new entrants when compared with the the top ten list of popular programming languages published in *OSFY* in 2017. Objective-C, a general-purpose, object-oriented programming language, first appeared in 1984 and is used mainly by developers in the
