

DVD OF THE MONTH

Stable Linux distros for all types of users.

Fedora 29 Workstation (64-bit)

Fedora Workstation is a reliable, user friendly and powerful operating system for your laptop or desktop computer. It supports a wide range of users—from hobbyists and students to professionals in corporate environments. The sleek user interface allows you to focus on your code in the GNOME 3 desktop environment. GNOME is built with developer feedback and minimises distractions, so you can concentrate on what's important. The ISO image for the 64-bit live edition can be found on the DVD under the *other_isos* folder.

CentOS 7-1810

The CentOS Linux distribution is a stable, predictable, manageable and reproducible platform. The latest update in the CentOS 7 series is built from the source code of Red Hat Enterprise Linux 7.6. The CentOS Project is a community-driven free software effort focused on delivering a robust open source ecosystem. The ISO image for the 64-bit live edition can be found on the DVD under the *other_isos* folder.

Tails 3.11

Tails is a Debian based live distribution designed to help its users browse the Internet anonymously and to circumvent censorship. The product ships with several Internet applications, including a Web browser, IRC client, mail client and instant messenger, all pre-configured with security in mind and with all the traffic anonymised.

What is a live DVD?

A live CD/DVD or live disk contains a bootable operating system, the core program of any computer, which is designed to run all your programs and manage all your hardware and software.

Live CDs/DVDs have the ability to run a complete, modern OS on a computer even without secondary storage, such as a hard disk drive. The CD/DVD directly runs the OS and other applications from the DVD drive itself. Thus, a live disk allows you to try the OS before you install it, without erasing or installing anything on your current system. Such disks are used to demonstrate features or try out a release. They are also used for testing hardware functionality, before actual installation.

To run a live DVD, you need to boot your computer using the disk in the ROM drive. To know how to set a boot device in the BIOS, please refer to the hardware documentation for your computer/laptop.
