

Unifying Data Protection Across Office 365, Google, Box & Endpoints

Today's digital transformation has significantly impacted the location and visibility of critical corporate data, often residing in endpoints and cloud apps, such as Office 365, Gmail and Box. Without an adequate protection and backup strategy, companies often find that data is lost after a failure or exposed to risk.

Did you know that your SaaS app data is at risk of loss?

Some of the top reasons for data loss are end user deletions, overwrites, malware or malicious activity. SaaS vendor SLAs don't cover for data loss when it's not their fault. In addition, the recoverability of data is at risk.

What will you do in the case of a ransomware attack?

Once files are encrypted, there are only two choices for an organization: restore from backup or pay up. There's no guarantee that you will get your company's data back, to ensure a business continuity, shift to Druva inSync to:

- Gain access to mission-critical data during and after a ransomware attack
- Receive automated alerts for potential ransomware threats
- Protect data distributed across endpoints and cloud apps
- Protection of all end-user's data sources, including laptops and mobile devices
- Full self-service data recovery, after accidental deletion or ransomware
- Centralized data governance, legal hold and archiving
- Minimize spoliation risks by not having to copy data and remove the chance of accidental deletion or purging when employees leave the company
